OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Broad Whitefish	<u>ALASKA DEPT OF FISH &amp; GAME</u>		<u>See Below</u>	<u>See Below</u>	<input checked="" type="checkbox"/>
	<u>APR 8 - 2003</u>				<input type="checkbox"/>
	<u>REGION</u>				<input type="checkbox"/>
	<u>HABITAT AND RESTORATION DIVISION</u>				<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:

This tributary to the Ublutuoch River is added by inference drawn from data collected through our radio-telemetry project, based largely in the Ublutuoch River, and based on fyke-net sampling of upstream lakes and tributaries. The lake/wetland area nominated is approximately .9 miles upstream from the Ublutuoch in a small tributary creek. The stream connection is downstream from a fyke net location fished in 2001 by MJM Research set in an upstream lake (see Trib 8). Given the high numbers of broad whitefish and humpback whitefish captured just downstream and the presence of radio-tagged broad whitefish in lakes in similar streams, it is likely that anadromous broad whitefish use this lake and connecting tributary. It is our best professional judgment that all lakes connected to the Ublutuoch River, downstream of the upstream most documented water body contain anadromous broad whitefish at least during summer months. Circular symbols on map represent fish in hand data, octagon symbols represent areas added by inference.

1300 College Rd.  
Fairbanks AK 99701

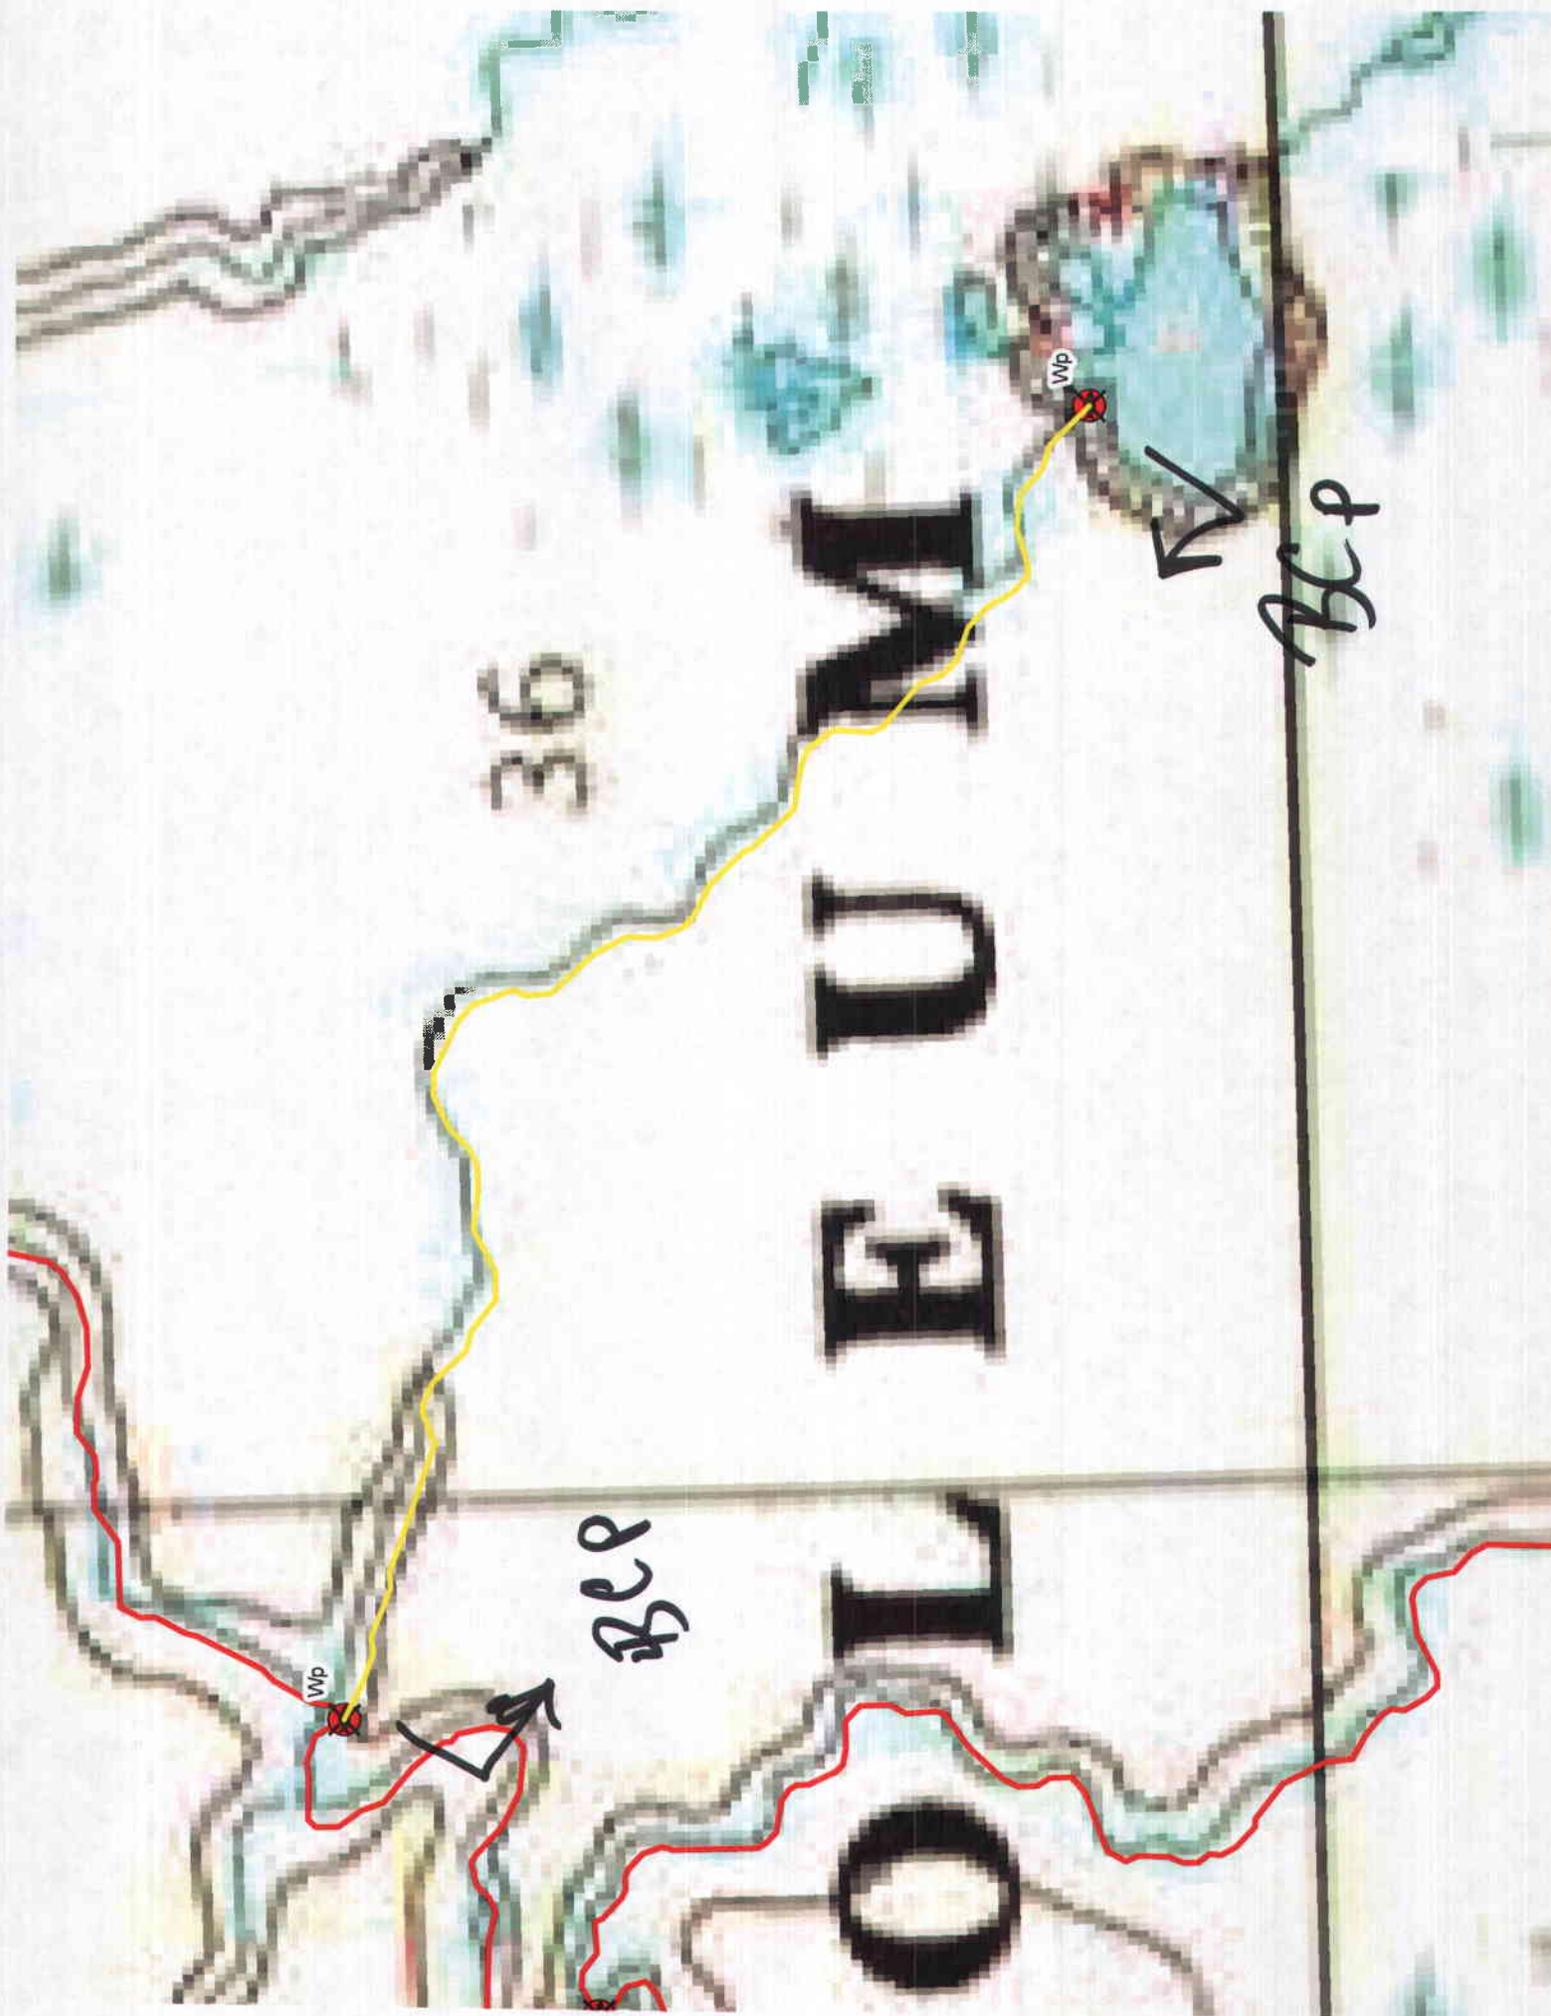

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.
