Subject: AWC species errors

Here are the errors I found. If you look at the maps, you can see the errors. In some cases, you can kind of imply that the specie carries to the next lower stream but in others it's not so clear. The errors are actually in the parent streams of each of these listed and the species listed in the catalog would be incorrect for them also.

Sorry about this.....The species were always our last priority in making these maps and transferring the maps to digital. It's an ongoing project and we might always be looking for ways to check the data.

The stream numbering errors only affect the catalogs.

I need to make one more check on the lakes next week.....

SGN 8 species errors + 1 stream numbering error

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Fish captured by electro-fishing (all released). 4930 seconds shock time for three 50-meter stream reaches, each separated from the other by 50 meters. Coho nose-fork lengths ranged ranged from 7.1 to 10.0 cm (dollies 7.8 - 10.6). Stream habitat: riffles and runs; width 0.71 to 2.58 meters, depth 0.18 to 0.37 meters at thalweg. Bottom sediment: peat, sand, gravel, cobbles, wood, and small boulders.

GPS coordinates (UTM, NAD 83, UTM zone 05 N): 588882, 6658416 (easting, northing). Site #599 in our study.

See attached photos and map. Add new stream 244-20-10090-2030-3032-4005 w/ Coho salmon and Dolly Varden rearing
