OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Sockeye salmon	24 and 25 Oct 2012			X	☑
Least Cisco	20-29 Oct 2012	X			☑
Broad whitefish	25-Oct-12			X	☑
					☐
					☐

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: I caught 1 male sockeye salmon on 24 Oct and one on 25 Oct in my subsistence net in Ikroagvik Lake. Both were red bocied with a green head. They appeared to contain sperm and did not appear to be too spawned out (we ate one and it was good). We also caught 2085 least cisco from 20-29 Oct. Many of the females contained eggs which came out with mild squeezing. We also caught 1 broad whitefish. I have fished in this lake since 2000 and catch from 1600 -2200 least cisco each year. I have caught up to 16 broad whitefish in a season. This is the first time I have caught sockeye salmon.

Add new stream w/ sockeye salmon, least cisco & broad cisco present and lake

This is very interesting
I'll contact Geoff and see if he will complete a nom form

Brendan, Bonnie, and J,

FYI, See the attached email and pictures. Geoff Carroll encountered a couple of sockeye just south of Barrow while subsistence fishing late last week.

Hi Dan,

Feel free to share the info with anyone you like. After catching the 2, we didn't catch any more the rest of the week. Another guy was putting nets in the lake as we were pulling ours out yesterday. We'll let you know whether or not he catches any.

We taste- tested one last night and it was fresh enough that it was very good eating.

Todd Sformo from the NSB Wildlife Dept collected some of the gill and will check out the DNA.

Hi Geoff,

Last weekend Craig George forwarded pictures of the sockeye that you guys caught at Ikroagvik Lake.

My first inclination was to forward the information about sockeye about these fish to Brendan Scanlon (SF area manager), Bonnie Borba (CF research, who worked on a project to document changing distributions of salmon), and J Johnson (Anadromous Waters Catalogue manager).

But, as you "collected" this information on your personal time, I thought I should check with you to see if you have a problem sharing the photos further.

I doubt that anyone from ADF&G, either SF or CF, is going to have funding anytime soon to come "investigate" this (in my experience) new pioneering group of fish. But somebody from the academic community who has grant money to deal with fish and climate change might be able to send a grad student or something to look at lake substrate and spawning habitat, and look for juveniles to see if a population is actually being established.

Also, J Johnson may hit you up with a bit of paperwork to put this information into the Anadromous Waters Catalog.

What are your druthers? Or would you like to contact these people?

Dan

Subject: Sockeyes

We were amazed to catch a sockeye salmon in Ikroagvik Lake Wed evening, but even more amazed to catch another one Thurs evening. To catch 2 in 2 days makes me think that a fair number of sockeyes must have moved in there this fall. I guess, with the flow in the outlet stream being much greater this summer (it also lowered the water level in the lake 1 1/2 feet), sockeyes were able to swim in there. It is very strange because we almost never catch sockeyes in the subsistence nets in the summer. The sockeyes are both males that are in pretty decent condition (not too spawned out).
