Subject: St. Lawrence Island fauna

Ed, here is some info (for the Anadromous catalog) on the fish, wildlife, and riparian vegetation observed at North east cape on Saint Lawrence Island between August 1 and August 4, 1999. The Suqitughneq River enters the Bering Sea at Kitnagak Point, the Quangeghsaq River enters the Bering Sea about 2.8 km west of Kitnagak Point and the Tapisaghak River enters about 5.8 km east of the point. These sites are on the north about 15 km west of the Northeast Cape of St. Lawrence Island. You can look up the coordinates for the catalog and distribute as appropriate. Larry B.

Fish Species Collected

Fish species collected in the Suqitughneq River were:

1. Dolly Varden *Salvelinus malma* (resident and anadromous; fry, smolt, and adult).
2. Alaska blackfish *Dallia pectoralis*.
3. Ninespine stickleback *Pungitius pungitius*.
4. Fourhorn sculpin *Myoxocephalus quadricornis*.

Fish species collected in the Quangeghsaq River were:

1. Dolly Varden *Salvelinus malma* (adult anadromous only).
2. Alaska blackfish *Dallia pectoralis*.
3. Ninespine stickleback *Pungitius pungitius*.

Fish species collected in the Tapisaghak River were:

5. Dolly Varden *Salvelinus malma* (adult anadromous only).
6. Pink salmon *Oncorhynchus gorbuscha* (adult).

Riparian Vegetation

Riparian vegetation was typical of tundra habitat. Grasses, sedges, willow and wildflowers dominated. Dominant riparian plants were collected for identification. Plants identified were:

1. Cotton grass *Eriophorum* sp. (especially *E. angustifolium*).
2. Coltsfoot *Petasites* sp. (especially *P. frigidus*).
3. Jacobs's ladder *Polemonium* sp. (especially *P. acutiflorum*).
4. Club mosses *Lycopodium* sp.
5. Willow *Salix* sp. (especially *S. chamissonis*, *S. arcticus*, and *S. pulchra*).
6. Crowfoot *Thalictrum* sp.
7. Nagoon berry *rubis arcticus*.
8. Monkshood *Aconitum* sp.
9. Arctic dock *Rumex arcticus*.
10. Rose root *Sedum* sp.
11. Bog star *Parnassia kotzebuei*.
12. Swamp horsetail *Equisetum fluviatile*.
13. Polargrass *Arctagrostis latifolia*.

Wildlife

Wildlife was observed but was not particularly abundant on the Northeast Cape project site during the 31 July to 5 August 1999 visit. The birds and mammals seen on the project site are included in the list below.

1. Common raven *Corvus corax*.
2. Sandhill crane *Grus canadensis*.
3. Unidentified loons *Gravia* sp.
4. Long-tailed Jaeger *Stercorarius longicaudus*.

To: 'larry.d.bartlett@usace.army.mil'
Cc: McLean, Mac
Subject: St. Lawrence Is. Streams

Larry, I was not able to find much out about streams on St. Lawrence Is.

You were correct there are no streams listed in the AWC for St. Lawrence Is.

The old Alaska Fisheries Atlas (ADF&G 1978) shows two streams as having salmon present. Both on the south side of the island, the Koozata River was listed as having Coho (S.C. island) present and the Maknek River (S.E. end) was listed as having Chum present. As I mentioned, they are not in the AWC. I am not sure why and at this point have not found any supporting documentation. Additionally, the 1985 Alaska Habitat Management Guides shows the Kapsukalik lake and Koozata drainages as having Grayling and Arctic char and the Ongoveyuk as having Arctic Char. White fish were also indicated in a stream near Tomname Mountain which drains into Seepanak Lagoon (N.E. island).

I also talked with Comm Fish and Subsistence Divisions. Subsistence did a harvest survey out there last year and found that the reported harvest for Savoonga and Gambell was 3189 fish. All five species of pacific salmon were indicated as having been caught. However, where the fish were caught is unknown. It is known that the primary method was by set net, probably beach oriented. There was also some hook and line catches. It is not known if these are fish passing by the island or fish actually using the streams on the island. Charlie Lean with Comm Fish said that he has had some second and third hand information that there are fish using the streams on the island however there has never been any formal inventory. He said this is further complicated by the fact that the whole of the island is owned by the Native groups and the shorelands are divided up amongst the family groups.

The resource atlas associated with the Bering Straits Coastal Resource Service Area (CRSA) shows several streams on the island as fish streams but does not show associated species. There are at least five of these that are in the N.E. portion of the island. As near as I can tell they are: Fossil River and Kapsukalik Lake drainage, Ongoveyuk River and large stream to east which share mouth, and a large stream draining into Tomname Lagoon. These roughly mimic the info in the Habitat Management Guides

In short, I was not able to find any hard evidence on the salmon resources on the island.

As for ADF&G participation we would like to be kept in the loop especially since it sounds like there will be instream work. Any permits etc. that would be issued for the project would come out of Region III therefore they would be the most likely candidates for a trip out there. You can check with Robert "Mac" McLean, if he can't help you he'll be able to put you in contact with the appropriate person.

If you do come up with any historical or new fish resource information please let me know so I can add it to our files or get it into the AWC.
