|                |                  |          |         |         | <input type="checkbox"/>            |
|                |                  |          |         |         | <input type="checkbox"/>            |

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:** Two adult chinook salmon were seen by GW Scientific crew while installing water quality monitoring equipment at mouth of Gilles Creek as part of Alaska Boreal Forest Council's Shaw Creek 319 project. Fish were observed to jump log in creek and travel up Gilles Creek for an unknown distance. GPS location of station is N64.35361° W145.54211° (NAD27).

Add Kp to Shaw Creek up to mouth of Gilles Creek.

5  
creek (Shaw Creek) extended per nom # 04-486  
Add Kp to junction of Shaw & Gilles CK

JD, Attached is maps for the Gilles Creek/Shaw Creek nomination I send earlier. These maps were made by Jim Durst (DNR habitat biologist). Jim also included another nomination form for Shaw Creek, which is basically the same as the one I sent, but includes Shaw Creek of which Gilles Creek is a tributary of. This is preferable over just nominating Gilles Creek.

Cool. Here's the rest of what I put together in case it's helpful.

Importance: High

Fronty:

Attached is the nomination form I did based on GW Scientific's pictures of chinook adults at the Gilles Creek monitoring station.

Please print it, sign it, and fax it back to me (456-3091) TODAY so I can get it down to Anchorage with the maps, etc. before the nomination deadline.

-Jim
