Subject: RE: specs on FTIII for FY09 Anadromous catalog work

J,

I was going over a stream near Salana; named Ahtell Creek (212-20-10080-2605-3019). On the printed maps you sent me it is designated in red, which means it has not been nominated. When looking at the on line Fish distribution reader, Ahtell Creek is in Blue which means it has recently been nominated? I was going over some records that showed CF collecting King Salmon for genetic sampling and recovered one King Salmon. Habitat also indicates that sockeye exist there as well. Should I nomination this stream? Or has this already been done? Do you have an online site where I can see if a creek I'm doing research on has already been nominated? I don't want to duplicate the process?
