IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: This AWC designation is actually part of Jesse Spring and does not require additional AWC numbering. See "Jesse Spring.doc" for description and map. Jesse Spring is interconnected with Jan and Fronty Springs (no AWC designation for Jan Spring) in close proximity to each other but are treated separately. On the Google Earth photo, The headwaters of Jesse Spring opens wide in the appearance of a small lake but should be considered as one water body.
