OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Dolly Varden	<u>Delete</u>				<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Dolly Varden should be deleted from Little Campbell Creek. There has been no documented anadromous Dolly Varden population in Little Campbell Creek. Fish trapped by Lee Rogers and Bill Donaldson in 1982 are suspected to be resident fish. A barrier to fish passage appears to be located downstream of O'Malley Road, immediately upstream of Our Road.

Name of Observer (please print): Stewart Seaburg
