IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Stream course was observed at low elevation from helicopter during fish habitat investigations. Channel was ground sampled at NP033 and NP034. Current course of stream is indicated on attached map by yellow line, which is different than currently cataloged. The middle half of the stream course traverses flat ground and stream banks are not confined. Channel location may change over time, particularly if road construction and timber harvest continue in floodplain.
