OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
O. kisutch (coho)	7/11/2001		14		<input checked="" type="checkbox"/>
O. tshawytscha (chinook)	7/11/2001		19		<input checked="" type="checkbox"/>
O. mykiss (rainbow)	7/11/2001		9		<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

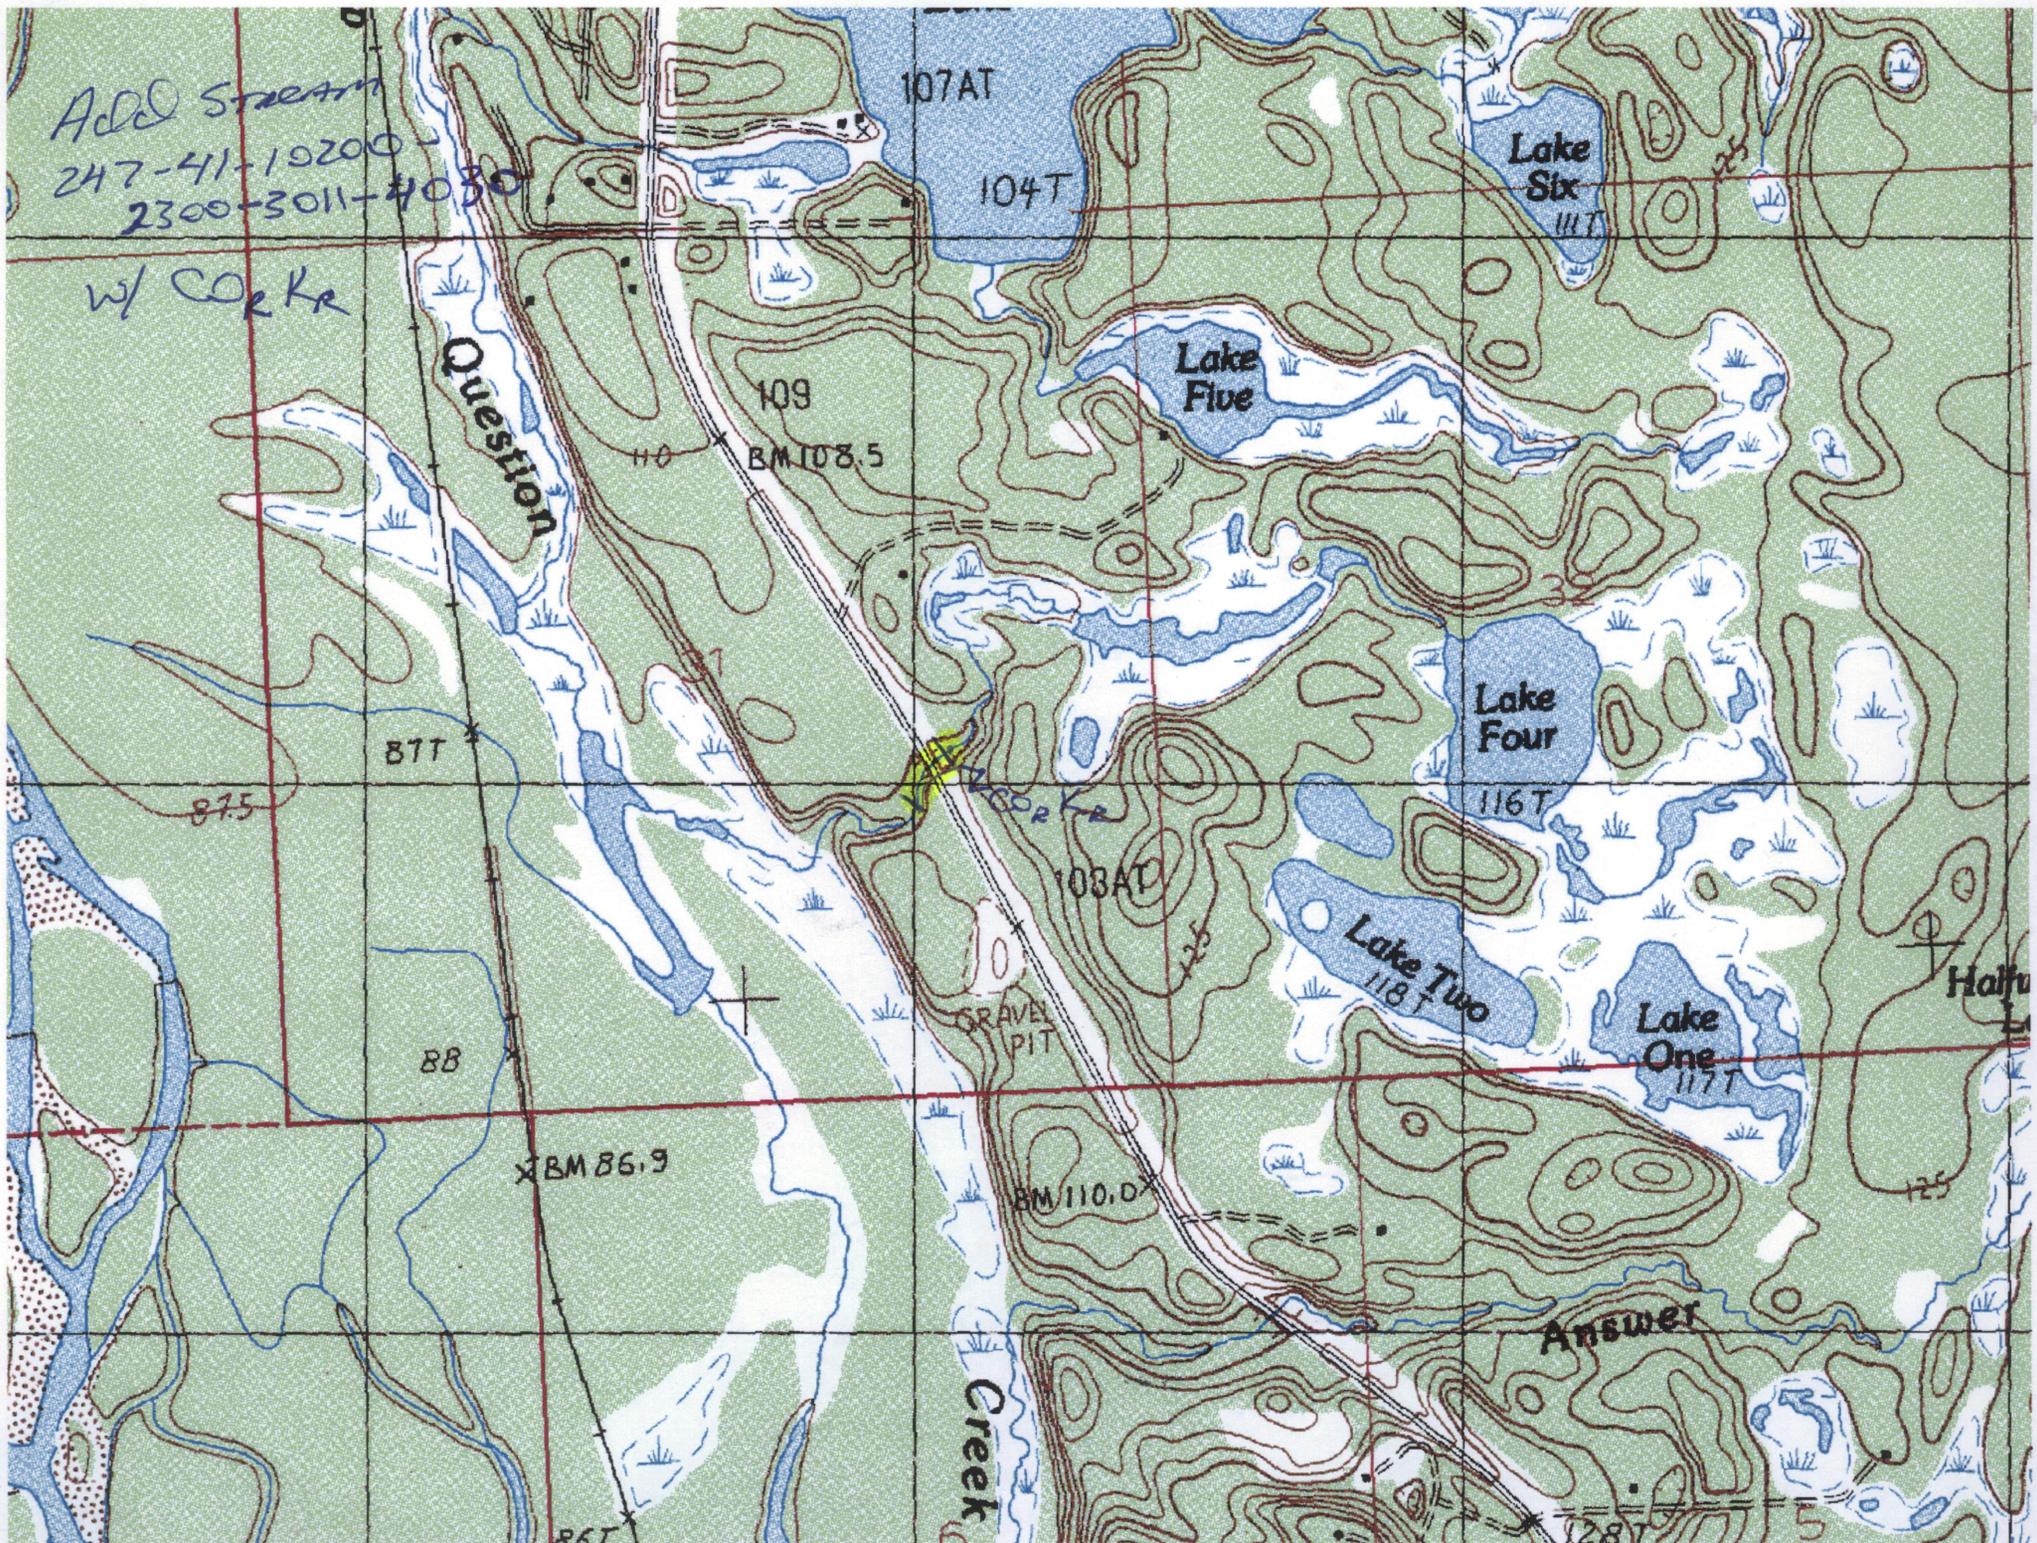

**Comments:** Sampled upstream (east side of highway) of culvert running under the Talkeetna Spur Road using Smith-Root Model 12 Electrofisher; captured juvenile rainbow (1), coho (4), chinook (4). Four additional juvenile salmonids were observed but not netted. Also sampled downstream of the culvert. Below the culvert coho (10) and chinook (15) juveniles were captured along with juvenile rainbow trout (8). The culvert was a 60" x 130' cmp.
