IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: We walked from the mouth of Whittier Creek to the waterfall. We witnessed about 5 adult coho between the mouth of the creek, and the rock weir (see photo). The attached map provides a location of the upper limit of witnessed coho distribution.
