OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Coho salmon	6/1/2006	0	2		<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes, etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat, locations, types, and heights of any barriers, etc.

Comments:

The fish were captured with two minnow traps baited with salmon roe in the small unnamed stream that flows into Willow Creek near the confluence of Willow Creek and the Susitna River. Each trap produced one fish each. The traps were set upstream from the culvert that conveys the flow under the road. There were several small beaver dams in this area.

*Add new stream w/ COR
referred to 745 for hydrography*
