IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Fish captured by electro-fishing (all released). 3062 seconds shock time for three 50-meter stream reaches, each separated from the other by 50 meters. Coho nose-fork lengths ranged from 8.0 to 9.8 cm (dollies 6.5 - 13.75). Stream habitat: alternating runs, and riffles; width 0.50 to 1.07 meters, depth 0.20 to 0.48 meters at thalweg. Bottom sediment: fines, sand, gravel, cobbles, and small boulders.

GPS coordinates (UTM, NAD 83, UTM zone 05 N): 583314, 6661598 (easting, northing). Site #499 in our study.

See attached photos and map.
