IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Fish captured by electro-fishing (all released). 2904 seconds shock time for three 50-meter stream reaches, each separated from the other by 50 meters. Coho nose-fork lengths ranged from 9.3 to 11.3 cm. Stream habitat: glides and pools; width 1.45 to 2.43 meters, depth 0.70 to 1.01 meters at thalweg. Bottom sediment: peat.

GPS coordinates (UTM, NAD 83, UTM zone 05 N): 576678, 6639378 (easting, northing). Site #44 in our study.
