| | | | | | <input type="checkbox"/> |

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:
 During a foot survey I observed about 10 adult Sockeye Salmon and 100 adult Chum Salmon spawning in the upper reach of Williwaw Creek (Figures 1 and 2). The creek in this area was constructed for a U.S. Forest Service habitat improvement project. Williwaw Ponds III and IV flow into this reach. Visibility during the survey was good.
Species and life stage previously documented.

Name of Observer (please print): Will Frost, Habitat Biologist
 Signature: Date: 8/30/2011
 Agency: ADF&G, Division of Habitat
 Address: 333 Raspberry Road
Anchorage, AK 99518

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Anadromous Waters Catalog.
 Signature of Area Biologist: _____ Date: _____ Revision 05/08
