IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: A review of AWC database revealed that several table entries for AWC water body number changes do not include a nomination number. This lack complicates data searches as many queries rely on nomination number to facilitate searches. To correct this, this generic nomination was created which lists water body number changes over time on the following pages.
