					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments**  
I used a GPS to locate the correct location of the unnamed stream. The stream flows under the Seward Highway through culvert, ANC04-4A235. The location of the stream as shown in the AWC is incorrect. Please use my tracks to correct the AWC (Figures 1 and 2).  
*Revise stream hydro, reposition pts.*

**Comments:** Minnow traps were set along the Seward Highway from mile 99 (Bird Point) to Ingram Creek (mile 77). A copy of the field report from this trapping project is attached. Seven juvenile coho salmon were caught in set 1-12 at mile 97.8 (Tables 1 and 2; Figures 1 and 1A). The trap was set along the long straight stretch of highway just north and west of Bird Point. The trap was set in a muddy tide gut that drains a beaver pond. The beaver pond is east of a gravel pit access drive. Juvenile jumpers were not observed. Figures 1A and 2A are anadromous waters catalog maps with minnow trap set locations denoted.

### MEMORANDUM

TO: Ed Weiss  
Habitat Biologist  
Region II  
Habitat and Restoration Division  
Department of Fish and Game

FROM: Doug Hill  
Fish and Game Technician  
Habitat and Restoration Division

DATE: 11/13/97

SUBJECT: Seward Highway minnow trapping--Bird (mile 99) to Ingram Creek  
(mile 75).

---

As requested by Lance Trasky, I sampled water bodies along a portion of the Seward Highway for the presence of juvenile anadromous fish. A total of 32 minnow traps were set at 30 sites between mile 76 and mile 99. Nineteen traps were set on July 1 (Tables 1 and 2; Figures 1, 2, and 3), eleven traps were set on the July 14 (Tables 1 and 3; Figures 2 and 3), and two traps were set on July 17 (Table 1 and 3; Figure 2). A total of 36 cohos were captured in six sets at five set sites. Numerous stickleback were caught at twenty-four set sites. Eleven adipose fin-clipped cohos were captured at one location; total from two sets made at the same location on different dates (Table 1).

A breakdown of the coho capture sites follows:

-Two traps, sets 1-14, 1-16 (Tables 1 and 2; Figure 3), were set at the inlet of a culvert. Two traps, sets 14-10 and 17-1 (Tables 1 and 3; Figure), were set in the culvert. Sets 14-10 and 17-1 were made at the same location on different dates. Eight fin clipped cohos were captured in set 14-10 and nine fin clipped cohos were captured in set 17-1. Cohos were observed prior to setting traps.

- One trap (set 1-12) was set 50' upstream of the culvert inlet. This trap was set in an extremely silty tide gut; no fish were observed prior to making the set.
- One trap (set 1-3) was set in a clear water pond where numerous smolt size jumpers were observed.

Smolt size jumpers were observed, but no anadromous fish were captured, at set sites 1-2, 1-9, 1-10, 1-11, 14-1, 14-2, and 14-9. Also smolt size jumpers have been observed in the vicinity of the sets made west of the Placer River (sets 14-4, 14-5, 14-6, 14-7). No anadromous fish were captured in these sets on this survey.

Set numbers 1-3, 1-12, 1-14, 1-16, 14-10, and 17-1 captured fish in waters not cataloged as anadromous fish habitat. These waters will be nominated for inclusion in the anadromous waters catalog.

An adult/jack (?) jumper, approximately 15-18", was observed at the mile 88.1 pond

Coho captured at the culvert sites may be transitory Turnagain Arm residents.

Four fin clipped cohos were presented to Paul Cyr (Sportfish Division) for shipment to the tag lab in Juneau.

cc: Lance Trasky  
Stewart Seaburg
