OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
sockeye salmon	08/20/2014			✓	

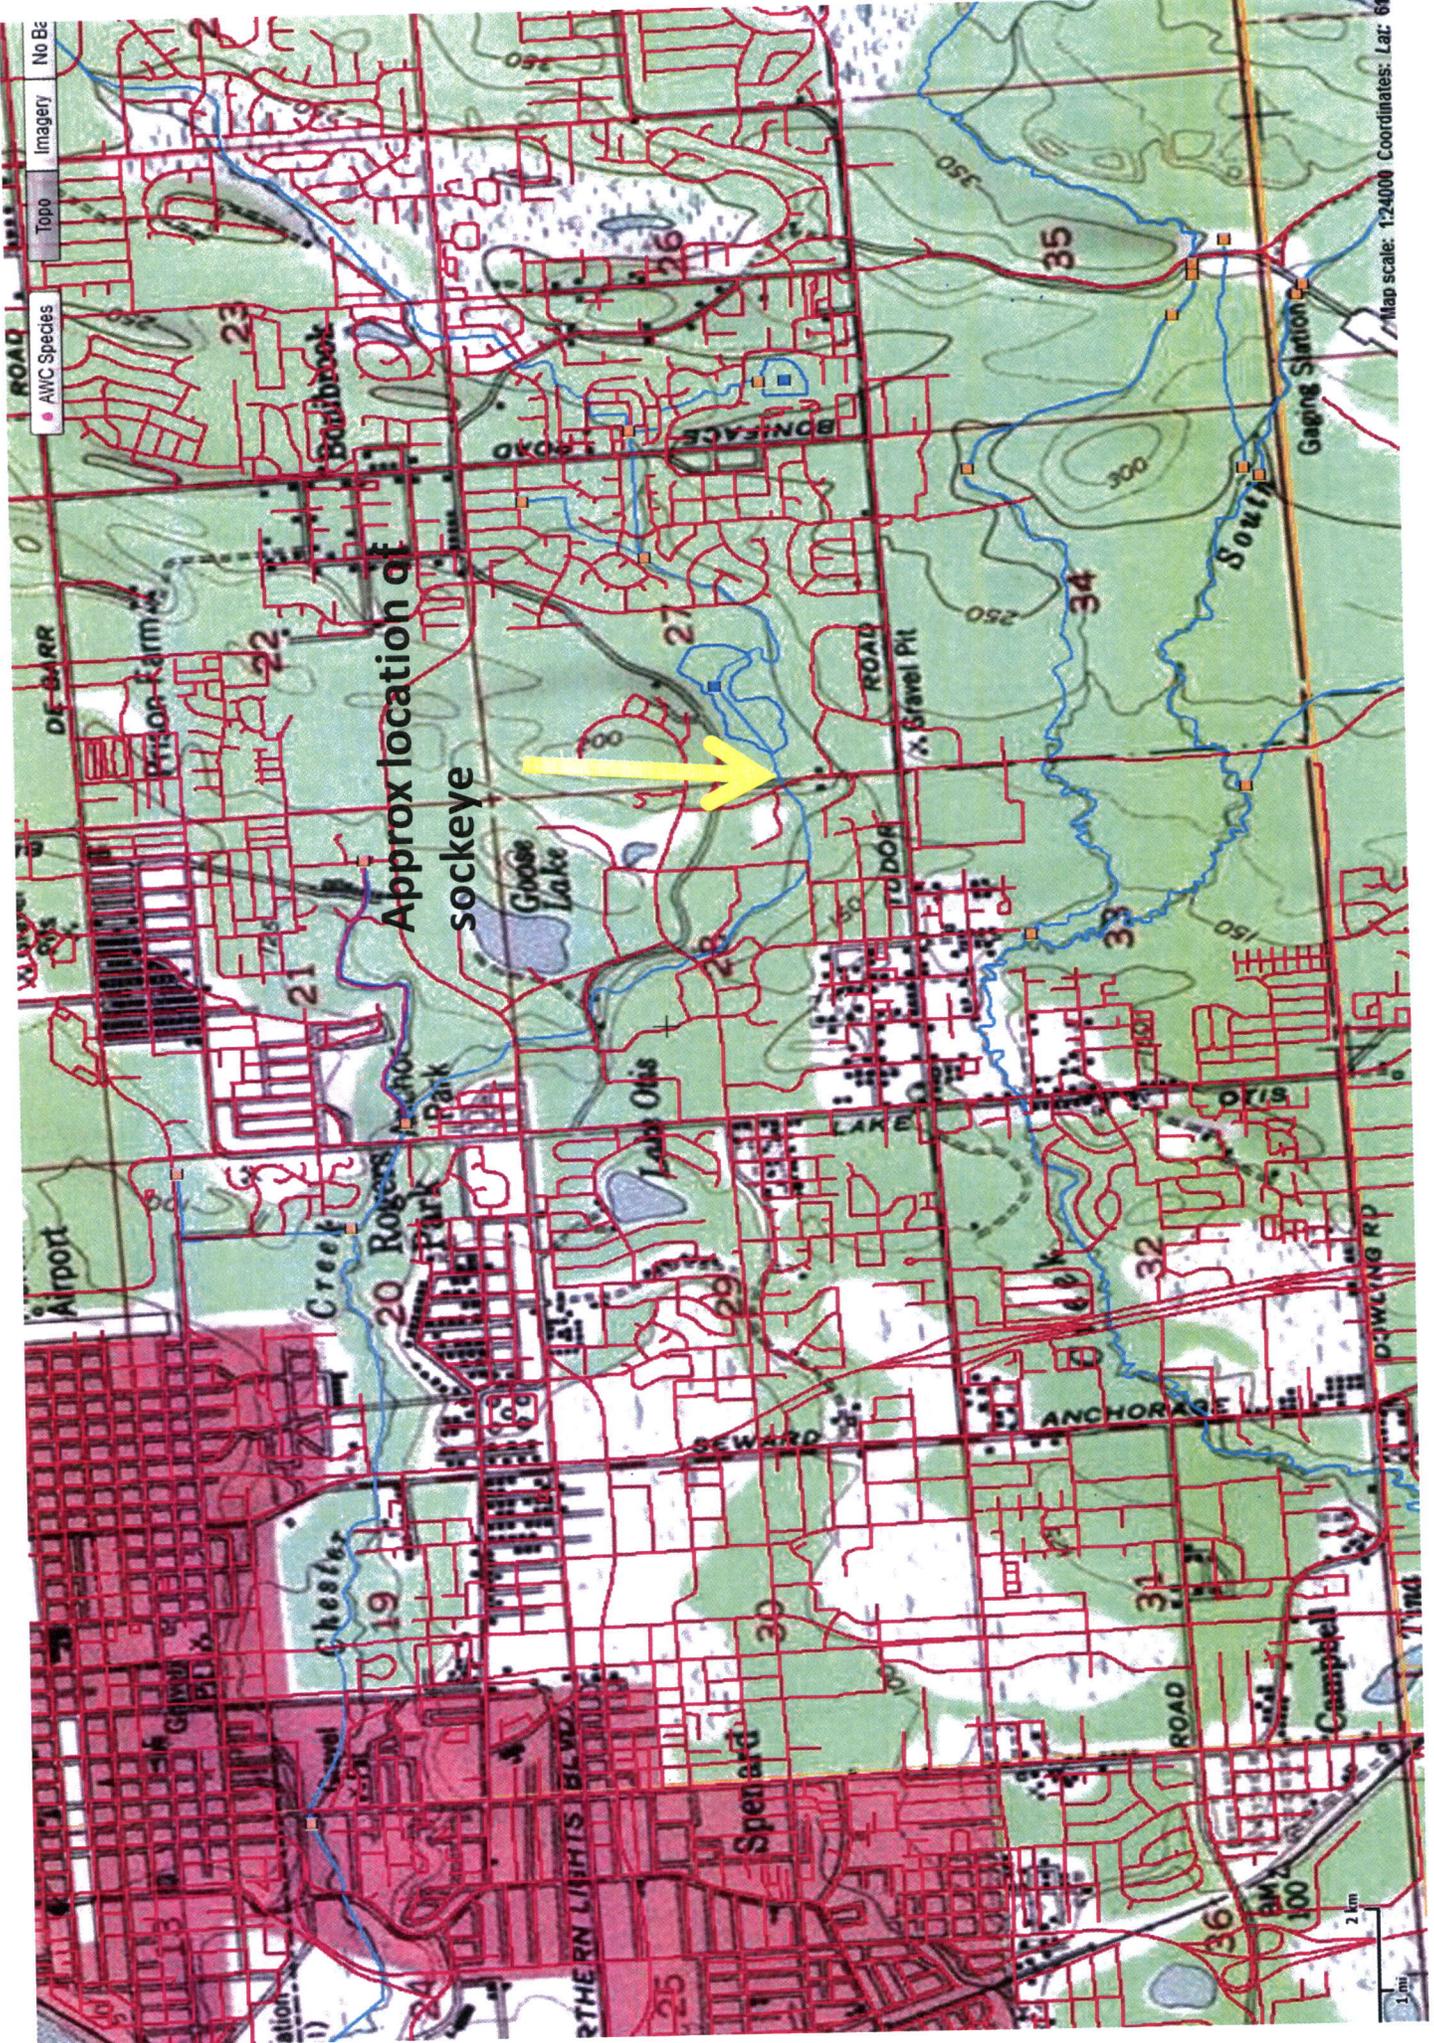

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:
 While working for the Alaska Department of Fish and Game's Genetics Department, I was scouting the area below University Lake for adult Coho Salmon. While checking the location near the small walking bridge over the creek, I spotted 6 adult sockeye salmon. They were red and appeared to be staging below the lake. I could not confirm if they were spawning or not. Water was clear and easily seen through. The outlet of the lake had an abundance of woody debris but did not appear to pose an upstream barrier to fish passage.
 Coordinates (Lat,Long): (61.185,-149.807)
add sockeye salmon present to 247-50-10050

247-50-10050-2302
