SUBJECT: Nominations for 1986  
Anadromous Waters Catalog

Attached are nominations for additions to the 1986 Catalog. This series of small streams have received special attention during the past year due to their proximity to proposed Forest Service timber sales and recent native land conveyances. We conducted repeated aerial surveys of the area throughout the spawning season documenting a peak number of fish near the end of August.

There was no blank nomination form with the packet we received so I used an older form with a slightly different format.
