Your #'s

1. (Lunch Creek) 1050 Sockeye - primarily off the mouth
29 pinks
10 chums

ALASKA DEPT. OF FISH & GAME
SEP 21
REGION
HABITAT

2.-3 (Half-way Creeks and lake beaches)
175 sockeye
3 pinks - all on beaches

4. (Creek 4) by itself -
450 sockeye off mouth
3 sockeye in Creek
4 pinks in Creek
3 chums in Creek

5. (East Creek) - 50 sockeye on beach adjacent
first mile of stream - 6 fish
second mile of stream - 0 fish

(Side Creek 5A) - Creek is adjacent to East Creek
- 600 sockeye off mouth
15 chums off mouth
- 1000+ sockeye up stream.

VF (Virus Free Creek) - 45 sockeye - in stream
5 pinks - in stream

6A (Right Creek - your map is not very accurate as this Creek is independent of Creek #6)
This is where we spawn fish

3050 sockeye below weir and off mouth
345 trapped between the weirs
~250 above weirs

6 & 7. Cannot really get into #6. Its small and alder choked.

7. Lower stream impossible to walk. We'll try to get a boat up it at some point
- There were less than 50 sockeye off the mouth
- There is a little cove toward #8, just beyond #7, with a small stream. There were 5000 sockeye in this cove... my guess is that they will spawn in #7.

8 & 9. Not surveyed.

- Most of fish in Coghill R. were pinks, >70%

Comment: #5, or 'East Cr', was full of silt/mud - with very few fish. This is not what we saw last year. The source of the mud is >2 miles up the stream. We would have expected a lot more fish in this one.
