OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Migration	Anadromous
King Salmon	8/27/92		✓observed many fish		✓sampled 6 juveniles 48-62mm

Provide any clarifying information, including number of fish observed, location of fish survey data, etc. Attach a copy of the fish survey data, if available. Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls.

Comments: Site 3-B-6

Stream 2207 is a swift flowing very steep creek which empties directly into the Copper mainstem. There is very little of a braided delta though there is a small alluvial fan. We shocked approx 100' of this stream and discovered many King juveniles of whom we counted and measured six (6) ranging in size from 48 to 62 mm
