OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Coho	6/28/96		X		X

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: This stream was surveyed for upper extent of anadromous fish usage on 6/28/96 using a backpack electroshocker. Access was via helicopter and the amount of shocking conducted was limited to determining if fish were present. The stream characteristics also limited the ability to effectively locate fish. Bank cover was heavy and the water was murky and some what fast due to run off. Visibility was poor. Flow was good and no barriers were observed but cold water temperatures may have been a factor in fish presence. The extent of fish usage may extend beyond this point.

Name of Observer (please print) Edward W. Weiss
 Date: 3/11/97 Signature: 
 Address: 333 Raspberry Road
Anchorage, AK 99518-1599

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.

Signature of Area Biologist: _____
