Revision Code: <u>A-2</u>	Drafted	Date

OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Migration	Anadromous
Sockeye Salmon	8/24/98	<input checked="" type="checkbox"/>			<input checked="" type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as any other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Fish observed during Habitat and Restoration Division fish habitat survey. During low level (25 feet) helicopter overflight, spawning concentrations of adult sockeye salmon were observed at the marked locations (01A05 - 01A09) > 500 adults observed.

Lake is the most upstream portion of surface flow. There are no significant inlet streams. Observed sockeye fish were in spawning colors and tightly congregated in schools, mostly at the heads of bays. Suspect shore spawning.

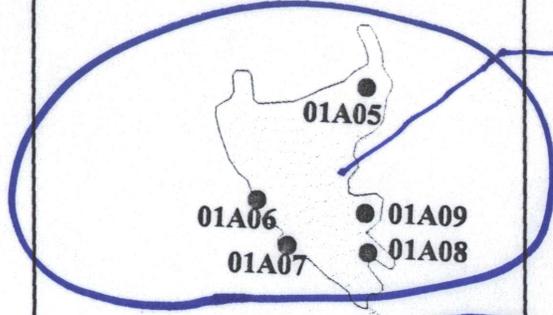

Name of Observer (please print) Michael Wiedmer
Date: 3/5/99 Signature: [Signature]
Address: 333 Raspberry Road
Anchorage, AK 99518

This certifies that in my best professional judgement and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.
