**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:**

*In the Fall of 1997, during a spawning escapement survey Coho salmon were observed spawning in this creek above the Copper River Highway. In the Spring of 1998 a crew returned to the area and observed cutthroat trout spawning. In subsequent electro-shocking surveys of this stream both Coho salmon and cutthroat trout were captured.*
