| | | | | | <input type="checkbox"/> |
| | | | | | <input type="checkbox"/> |

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: During October 21-22, 2000, minnow traps were set at three locations where streams cross the 1000 ML road between the South and North Forks of the Yakataga River. The traps were allowed to soak (1.5 - 5 hours) while a foot survey was conducted down the three streams until they entered into a catalogued stream (192-30-11500-2029-3012) in the NE 1/4 of section 7. Additional side tributaries were not surveyed at this time due to time constraints and there are extensive beaver ponds throughout the area.

ALASKA DEPT. OF
FISH & GAME
