IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: During October 21-22, 2000, minnow traps were set at two locations on a spur road location for Units 46, 47, and 48, south of the 1000 ML road after it crosses the S. Fk. of the Yakataga River. The traps were set at was determined near the upper extent of habitat. The traps were allowed to soak (1.5 hours) while a foot survey was conducted down both streams until they exited into the S. FK. The easternmost stream's upper extent is in the SW 1/4 section 10. The stream just west of it has its upper extent in the SE 1/4 section 9.

A third stream was surveyed with minnow traps at its two bridge crossings of the ML road near the northside of the main S. FK. Yakataga River bridge and at milepost 38. This stream exits into the S. Fk Yak River downstream of the main bridge crossing.

Name of Observer (please print): Linda Speerstra
 Signature: *Linda Speerstra* Date: 1/31/01
 Address: 304 Lake St. Rm 103
Sitka AK 99835

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.

Signature of Area Biologist: *Paul Spencey* Revision 3/97
