OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
coho salmon	10/21-22/00	3	10		<input checked="" type="checkbox"/>
Dolly Varden				10+ juveniles	<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: A tributary to Big River, this stream was observed to have spawning coho adults present in it during October 21-22, 2000 field surveys. The upper extent of the system terminates at a small surface lake on the north side of the mainline road. Two small side tributaries were found to have juvenile coho salmon and Dolly Varden Char during minnow trapping. The stream exits into one of the main channels of Big River in the NW 1/4 of section 31.
