ALASKA DEPT. OF FISH & GAME
FEB 09 2001
REGION II
HABITAT AND RESTORATION DIVISION

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: On May 27, 2000 2 baited minnow traps were set on upper portions of east Lydick Creek when a spur road location crossing is proposed. After a 15 minute soak 52 coho were captured in one trap and 23 coho were captured in the other. The traps were set at the stream junction located in the NE 1/4 of section 23. Upper limits were determined by surveying up stream until a gradient break was recorded as upper extent of fish habitat. Adult coho salmon remains were observed at the stream junction. The small tributaries entering stream # 2033 on the west side were not surveyed to the full upper extent of fish habitat due to time constraints.

On October 21-22, 2000 adult spawning coho salmon were present in the system up to at least the stream junction in the NE 1/4 of section 23.
