OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Pink Salmon	12/7/00	Yes		Bones of 7 fish	<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:** On December 7, 2000, during a stream inspection, this stream, located in the southwest corner of a bay on the north side of Sandy Point, on the east side of Prince of Wales Island (see attached map), was determined to be used by pink salmon as evidenced by the remains of at least 7 pink salmon along the stream banks for a distance of 200 feet up from salt water. At this point the channel becomes greater than 15 percent with minimal spawning habitat. The substrate is predominantly sand and gravel with a few larger boulders and the channel width is approximately 6 feet.

**ACTION:** Add stream for a distance of 200 feet for pink salmon spawning.

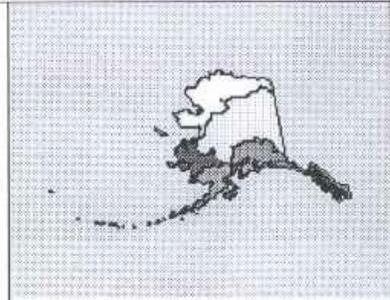

ALASKA DEPT. OF FISH & GAME
