**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:** Fish captured with Gee minnow traps baited with disinfected salmon eggs, 1-2 hour soak time. Trap coordinates and waterbody location determined by GPS - Garmin XL12 w/external antenna, averaged to <30' position error. No barriers detected between coho salmon and Dolly Varden upstream or upstream of upper trap.

Ed,

Included in this packet is the original nomination forms which you sent to me about a week ago upon our request. Like I said in our phone conversation, I had meant to send these back up w/ the modified Peterson Creek nominations, so that you could cross-reference new ones w/ the old ones, where it was necessary (because of the in-house stamps for nomination #). Note that I put **VOID** on all of these, as there were updates made. Hopefully, w/ these old nomination forms, you will be able to make sense of the new packet of nominations that you received recently.

Please give me a holler down here if I can further clarify anything.

Thanks,  
Jeff
