OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing
coho	April 24 - May 1, 2000		22

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; location of mouth and observed upper extent of each species, as well as other information such as: specific stream habitat; locations, types, and heights of any barriers; etc.

Comments: Location; Township 29S Range 37E Section NW 1/4 5 ; Latitude 60.144 degrees 14.644 (NAD27). Stream 9 on map.

Stream characteristics: Trib to mainstem with upper extent in conifer area. Substrate. Willow and cottonwood vegetation. Nice rearing stream; lots of cover.

Stream surveys were part of the Yakutat Fish Habitat and ATV Trail Assessment. We surveyed streams for fish using baited minnow traps. Soak times for traps were 15-20 minutes per trap/ two traps per sample site. Captured fish were identified and released. Teams were comprised of ADF&G and Yakutat Ranger District personnel.
