IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Location; Township 27S Range 36E Section SE 1/4 31 ; Latitude N59 degrees 31.716, Longitude W139 degrees 22.113 (NAD27). Stream is number 4 on the map.

Stream characteristics: Short length tributary to mainstem near collection of gradient breaks with subsurface water bubbling out of the ground. Heavy conifer overstory. Width .6 - .8 m; depth .4 - .6m. Adult fish remains present. Water temperature 6 degrees C.

Stream surveys were part of the Yakutat Fish Habitat and ATV Trail Assessment project. Field crews surveyed streams for fish using baited minnow traps. Soak times for traps were usually less than 30 minutes per trap/ two traps per sample site. Captured fish were identified and released on-site. Field teams were comprised of ADF&G and Yakutat Ranger District personnel.

Subject: W. Seal stream #4

Ed – this is my best guess. We walked in from a narrow open stringer to the southeast where the helicopter landed. I matched that with a compass bearing and GPS point to come up with the location. Phil
