OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
non (Oncorhynchus gorisc...	8/22/01	X		X	<input checked="" type="checkbox"/>
<u>PINK SALMON</u>					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:
Approximately 6,000 pink salmon were observed in the mouth of the stream during an aerial escapement survey. I think salmon spawn in the stream because of the volume of fish, and run timing is getting late for northern Sumner Strait. The stream length is approximately 500 meters. It is located approximately 2,200 meters south of stream 105-31-07. Its mouth is at 133°39'51.62", 56°30'18.49" and its end point is 133°39'34.84", 56°30'29.53". ADF&G will call this stream 105-31-05.
Please use the code 105-31-10050 when assigning a stream number to this stream to keep in sequence.
