OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Pink Salmon	4/10/2002	Yes	5	Yes	<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:** On April 10, 2002 I conducted a stream inspection of cataloged stream number 103-40-10790 in order to determine the upper extent of anadromous habitat. I began the inspection at the mouth of the stream and proceeded upstream for 10 meters where the stream split. The fork to the northwest, apparently stream 103-40-10790, is approximately 1.5 meters wide with a gravel/cobble substrate and a gradient of less than 3 percent, for a distance of 95 meters. Above this the gradient becomes greater than 15 percent and the stream width decreases to less than 1 meter. The water temperature was 5\* Celsius and pink salmon fry were observed in the mouth of the stream.

**ACTION:** Delete the existing arc for stream 103-40-10790 as it is located incorrectly. Redraw stream 103-40-10790 for a distance of 95 meters in the location shown on the attached map.

Date: 4/16/2002

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.
