OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
sockeye	10/1/2002 and 9/28/2003	100 adults			<input type="checkbox"/>
pink	9/28/2003	40 adults			<input type="checkbox"/>
coho	8/23/2003		2 juveniles		<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: On 10/1/2002 I observed approximately 100 adult sockeye enter this stream and spawn. On 9/28/2003 I observed approximately 40 pink salmon and 30 sockeye salmon spawned out and actively spawning in the creek. On 8/23/2003 Jeff Nichols (ADF&G biologist) captured 2 juvenile coho and 4 cutthroat with a dip net in the creek. Coho were captured 440 feet upstream from the lake at GPS coordinates: latitude: 55.78176; longitude: -133.45802 (format is decimal degrees, datum is NAD27, Alaska Zone 1). The stream flows north to south and enters the lake on the NW corner of the lake in section 21 T70S R78E CRM. The stream enters the lake at coordinates: N55 46.829 and W133 27.600. Average channel width is about three feet. Average depth is only a few inches. Adult fish may only be able to migrate upstream after a good rain. Nominated stream does not appear on USGS maps. I sketched in its approximate location on the attached map.

Sockeye added num# 03-198 add Ps & TOR
