IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: This stream is currently documented as Chinook salmon presence only. This is a well documented Chinook salmon spawning stream. There are 31 peak Chinook escapement surveys listed in the CF database "Alexander" between 1960 and 2004. Chinook salmon spawn above the section currently shown on the atlas. Extend anadromous range and add Chinook spawning.
