OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:

On May 24, 2006, as part of a Forest Practices inspection on Sealaska lands at Trocadero Bay on the west side of Prince of Wales Island, stream 103-60-10845 was inspected to verify a gradient barrier. Approximately 100 feet upstream from the stream mouth the gradient increases to greater than 25 percent and maintains this gradient or steeper for the remainder of it's length.

Shorten 103-60-10845 to less than 666ft

Action: Shorten stream 103-60-10845 to a distance of 100 feet.
