					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:

Based on the results of a stream survey associated with the Gravina Access Project a barrier consisting of a 10-foot vertical waterfall was located approximately 350 feet from the mouth of stream 101-47-10450-2002. Additional surveys above the waterfall resulted in the presence of cutthroat trout but no anadromous species.

Action: Stream 101-47-10450-2002 should be shortened to a point located at N 55°21'43.63" W 131°43'48.48" (see attached map) at the location of the waterfall. Waypoint was taken in NAD 27.

Shorten stream to point indicated odd barrier.
