IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Sub new stream w/ coho salmon rearing
 Lat and Long are in NAD27. This small meandering stream provides excellent rearing habitat with undercut banks, overhanging vegetation, pools, small riffles, and large woody debris. We electrofished here for 20 minutes and caught 2 dolly Varden (45-65mm) and 10 coho (30-35mm). In June I observed hundreds of coho and dolly Varden in this stream.

Wow, even with a puddle of brains you're still smart.

Don't worry about this until you have time, I just wanted to send it before I left for the day. Thanks again.

What brains I had are a puddle on the floor at this point.

Got your message, w/o the associated shapefiles the project doesn't really provide a great deal, the pdf shows what I got.
Let's try this again tomorrow OK?
Maybe if you sent the 2007stream_noms_duffield27 shapefiles, that will do it.

Hi J - my brain hurts and I can't even imagine what yours must feel like... Let me know if you can open this map. I created a shapefile with the 5 streams I'm nominating and there's some bonus info in the attribute table. I had projection issues and used the AWC reg05 arc layer instead of the 2007 version, but you'll probably turn off all the other layers anyway. I'm still submitting the nomination forms online. Good luck.
