OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:

The Catalog shows the upper reach going beyond the road. There is a 25 foot waterfall downstream of the bridge. Please correct the Catalog to reflect this natural blockage to fish. (Attachments).
Coordinates (Lat,Long): (58.114829,-135.360673)

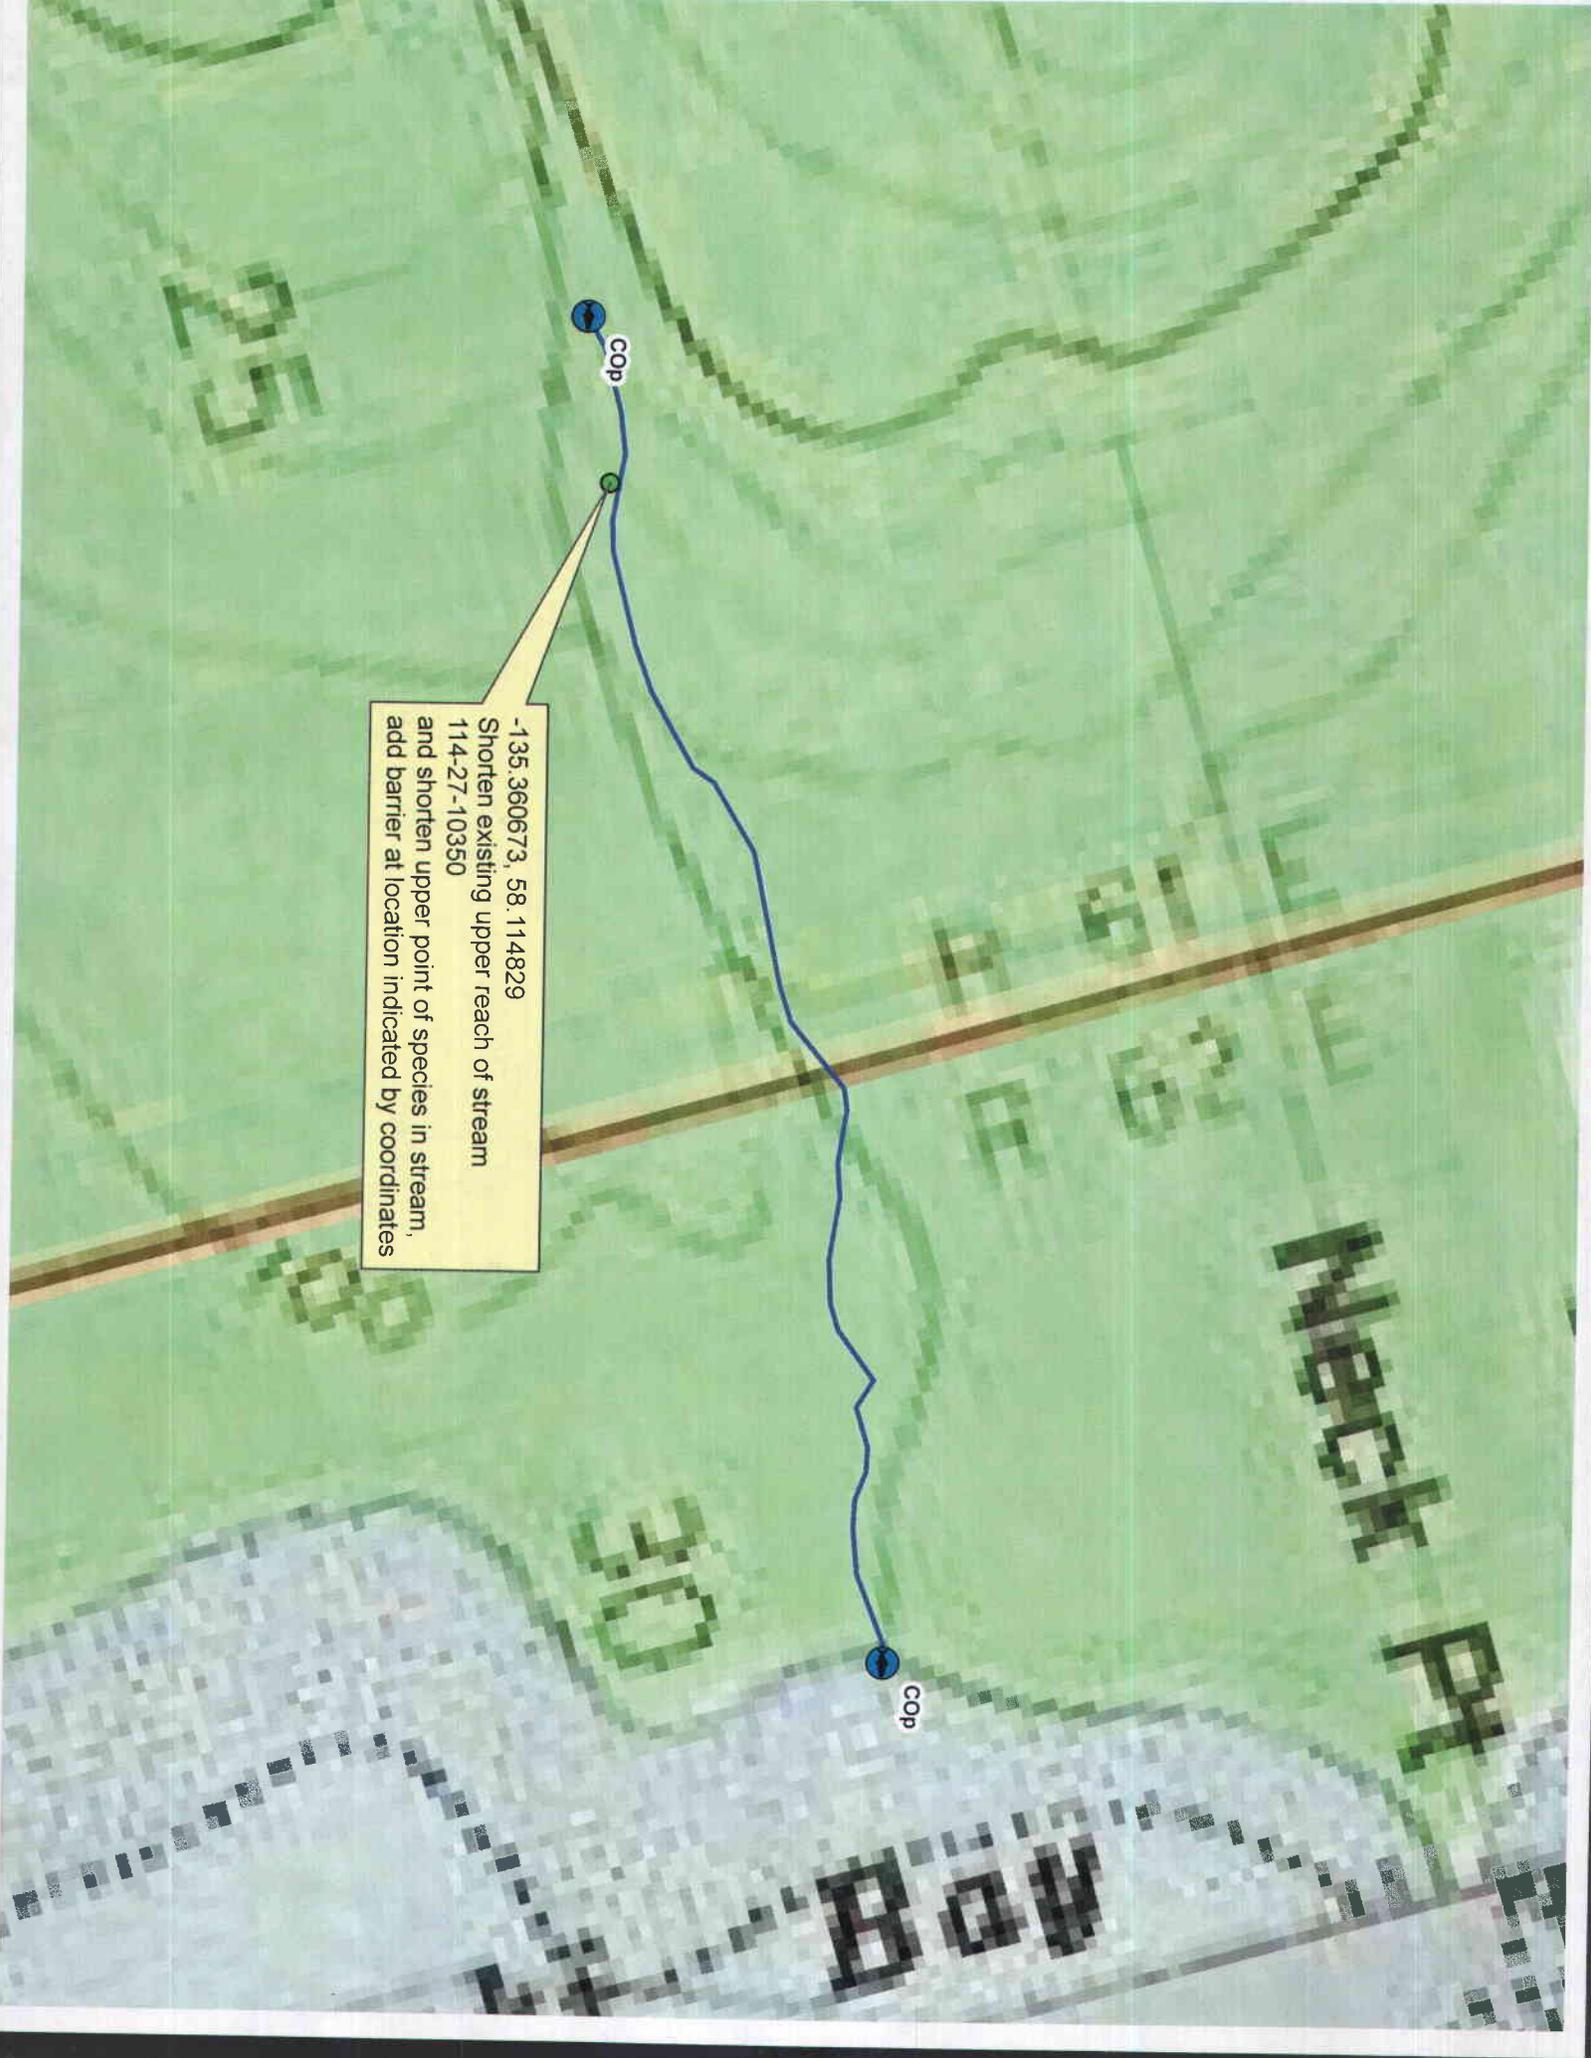

add barrier, shorten stream and upper extent of catch stream presence

Shorten existing upper reach of stream
114-27-10350
and shorten upper point of species in stream,
add barrier at location indicated by coordinates

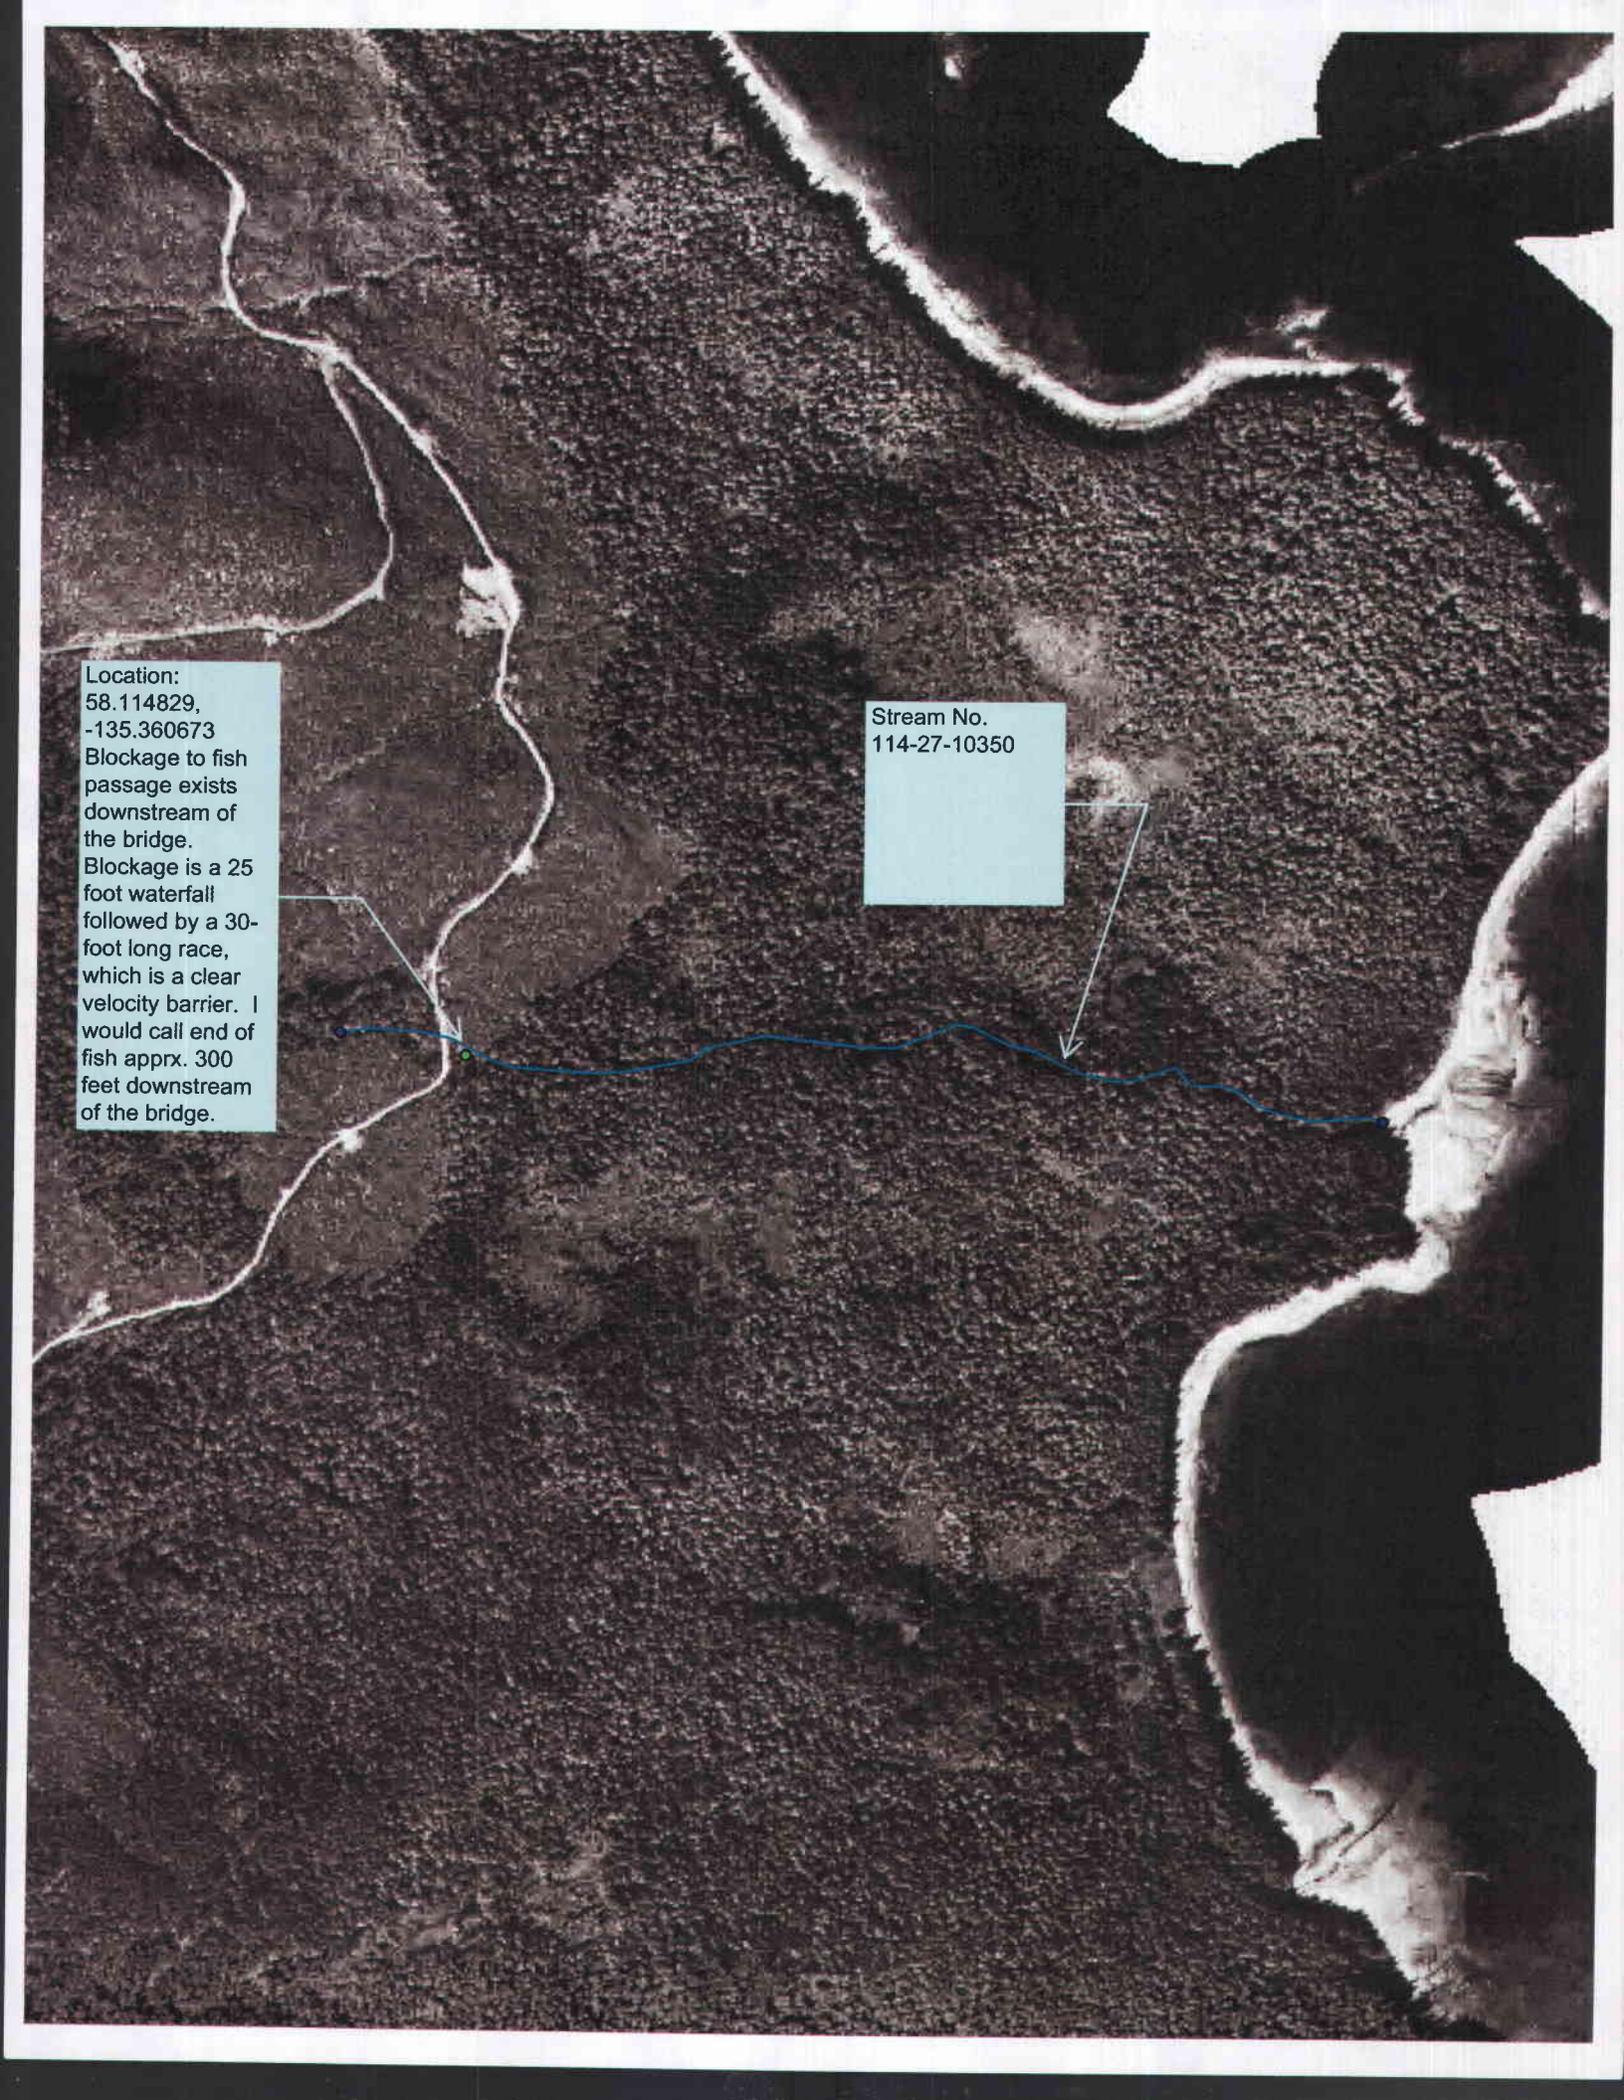

Location:
58.114829,
-135.360673
Blockage to fish
passage exists
downstream of
the bridge.
Blockage is a 25
foot waterfall
followed by a 30-
foot long race,
which is a clear
velocity barrier. I
would call end of
fish apprx. 300
feet downstream
of the bridge.
