IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Refer now to 08-518
While conducting a road condition survey with Roy Josephson (DNR) and John Hillman (Sealaska), I trapped a total of six coho salmon and one cutthroat trout in three traps in a tributary to Spasski Creek (114-27-10300) on June 18, 2008. I was unable to walk the stream course back to Spasski Creek due to time constraints. I digitize the stream course based on arial photos (see "trap 9" "trap 10" and "trap 11" in attachment).
