OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
eulachon	04/09/2009			✓	✓

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:
Aquatic Science Inc. biologists captured eulachon using a fyke net in Slate Creek during spring in the years 2006-2009. The fyke net was located about 25 meters upstream from the creek mouth. Biologists captured 39 fish in 2006, 44 in 2007, 158 in 2008 and 105 in 2009, which began in early-April of each year. Biologists didn't capture eulachon after mid-May in 2006 and 2008, or after early-June in 2007 and 2009. See attached excel spreadsheet that provides exact dates of captures and numbers of eulachon, per year.
