No I do not have lat and long info for those two as I did not actually get samples from there, but if you pull up GIS the eulachon were seen at the road crossing on the Scott R. and at the mouth of the Ahrnklin river (near Yakutat). I am sorry I do not have time to run over to GIS right now - it won't work on my computer right now. Let me know if you have a hard time finding these features. The road crossing on the Scott near Cordova is the main road going out to the airport (I know you are familiar with your home town).
 cheers, Rob

Rob

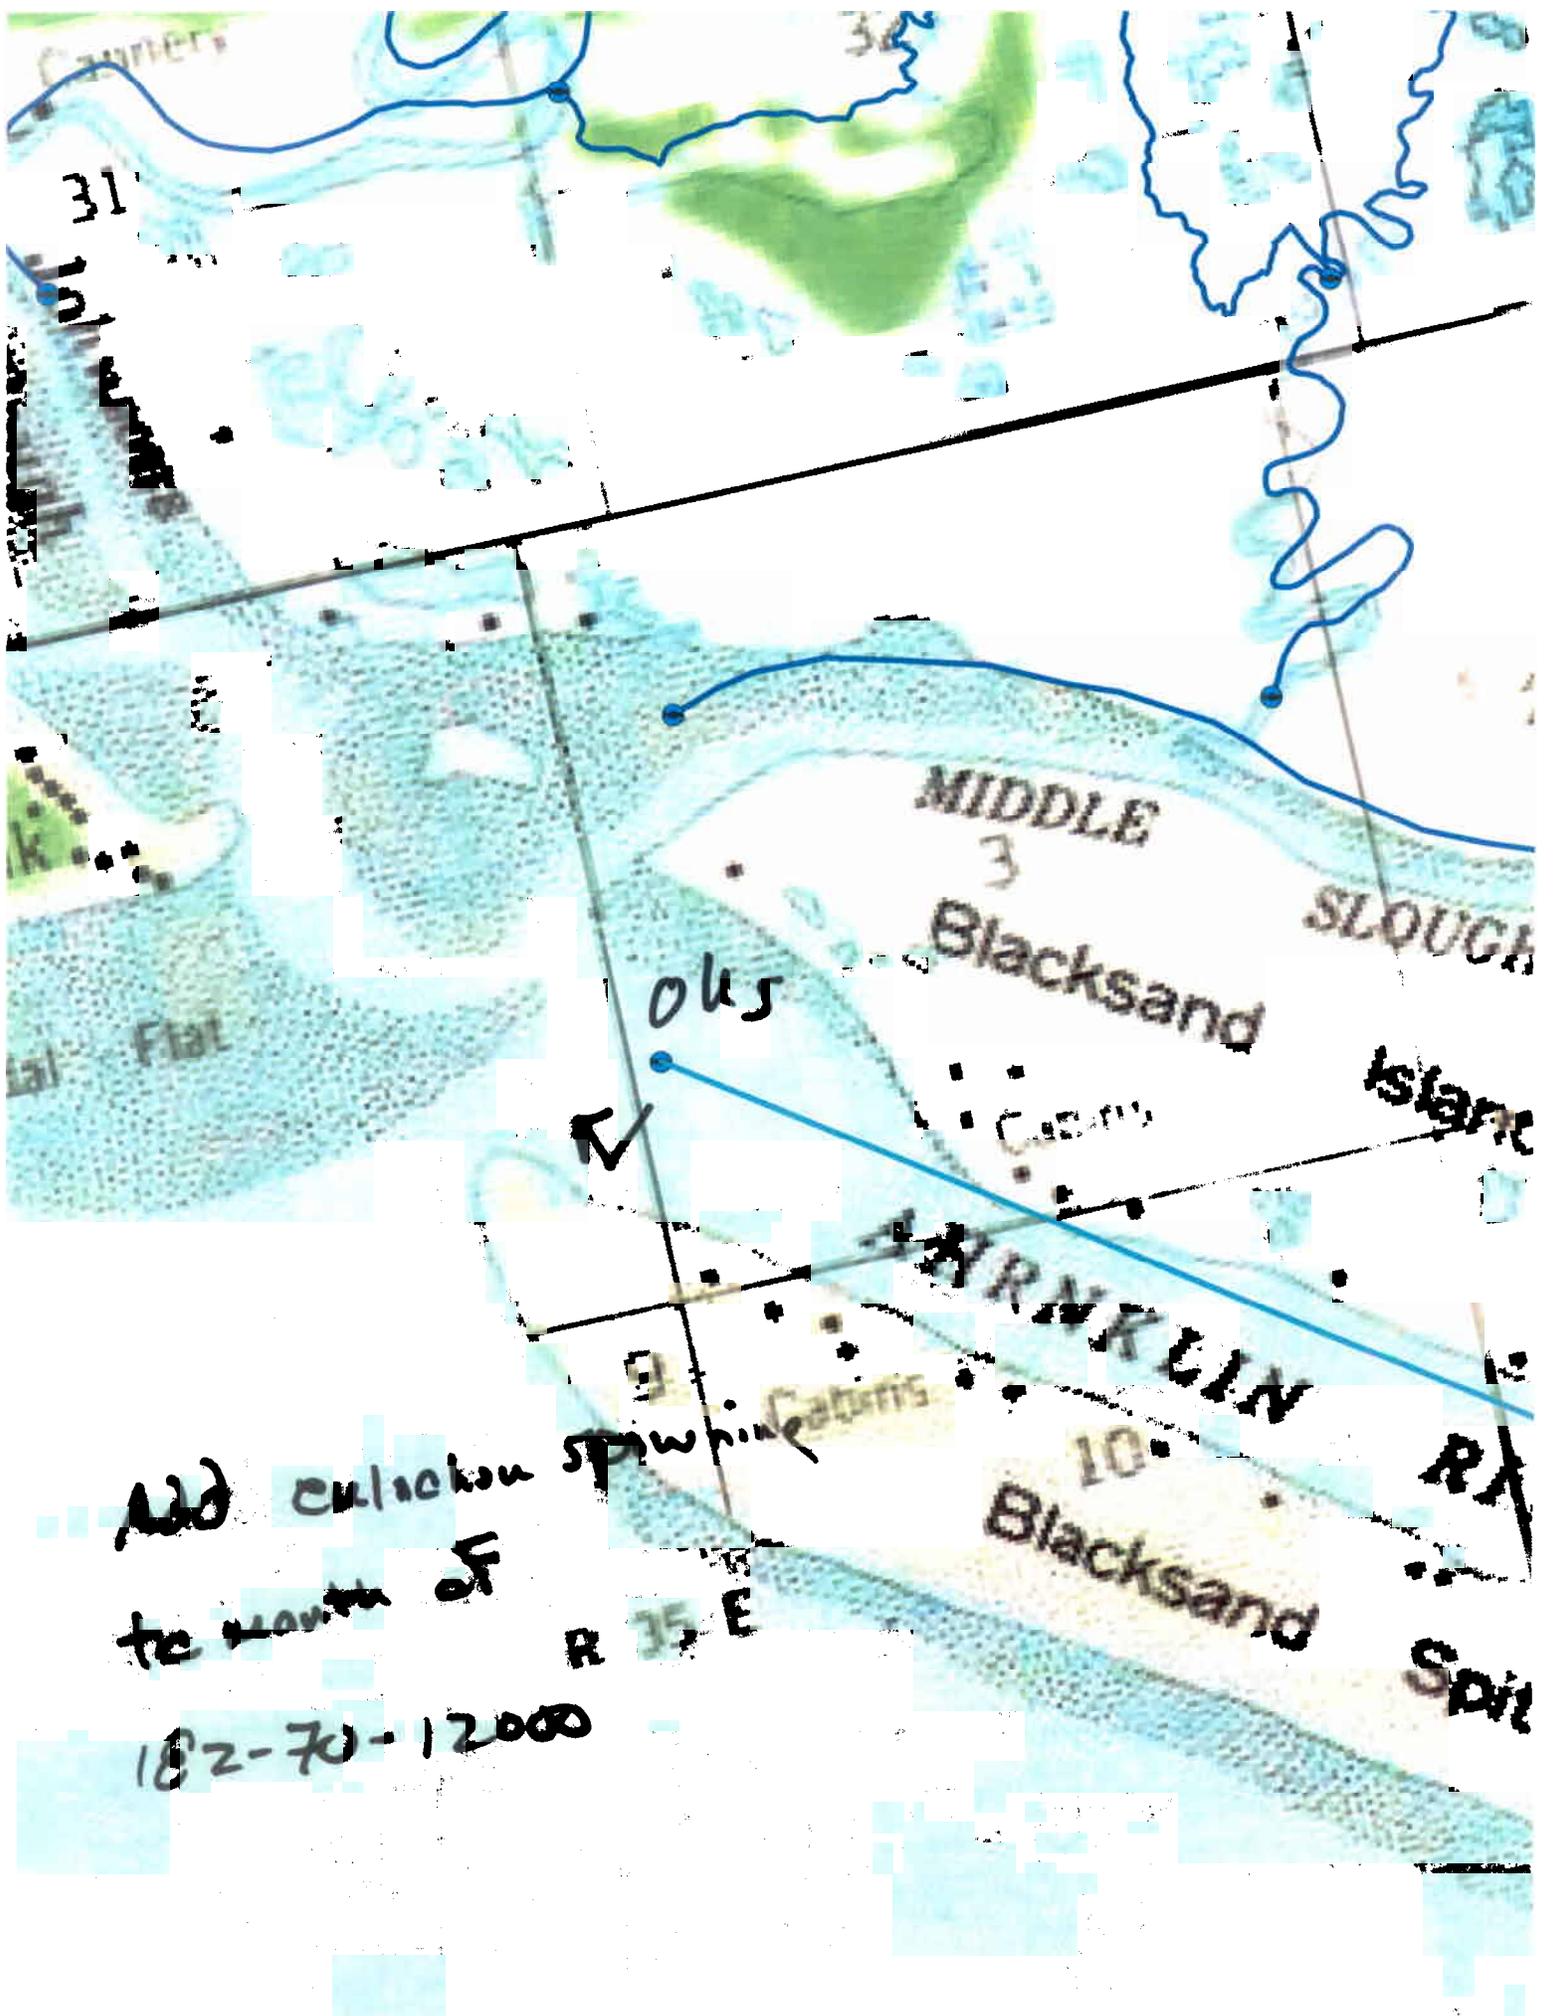

Spreadsheet does not have lat/long for Ahrnklin River or Scott R.
 Have ya got them?

Also, based on the additional site data ya sent I'll be putting together a few more nom forms for your signature. One thing I'd like to add to all nom forms is some reference to the sampling work, got any reports etc that I can use to supplement nomination forms?
