OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
coho salmon	08/03/2010		✓		✓

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:

On 8-3-10 I tracked and trapped this small tributary. This tributary appears to be spring fed from a small upwelling in a hillside beyond point #2 (58.3686, -134.4670). I placed one minnow trap at point # 2 (58.3686, -134.4670) and trapped 3 coho (40-50 mm). The tributary flows into Sawmill Creek at point # 1 (58.3683, -134.4676), and there are no fish passage barriers between the two points. Coordinates (Lat,Long): Upper(58.3686,-134.467) Lower(58.3683,-134.4676)

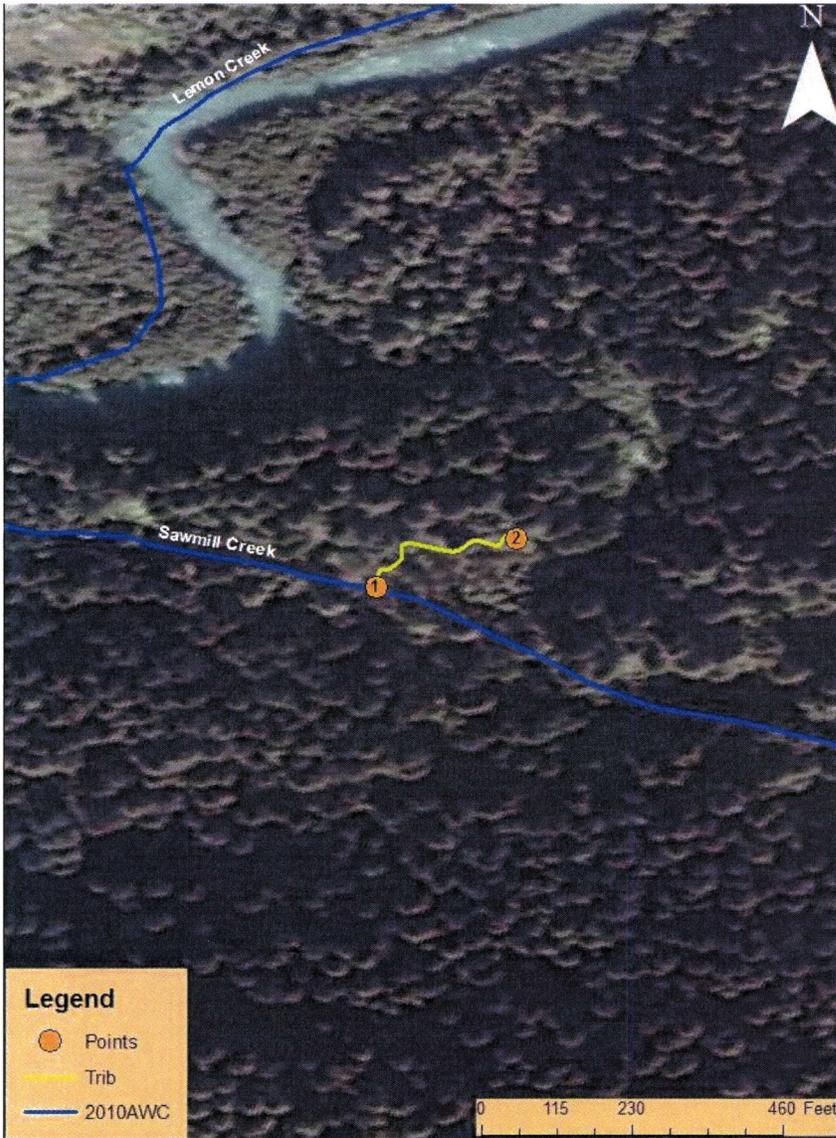

100' new stream w/coho salmon rearing (tracks available)
