OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
COHO	23 Sept 2010		3		✓

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: This wetland was originally nominated as a stream in 2009 but should have been nominated as a polygon. Schools of 50+ coho were seen at capture sites. This wetland floods in the summer and the coho disperse throughout and then concentrate in the main stream flowing through the wetland in the fall/winter Add polygon w/coho salmon rearing
