**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:** All fish captures were associated with an AKSSF funded research project (Taku River Habitats), exploring fish-habitat associations within Alaskan waterbodies of the Taku River. Fish capture methods employed baited and sterilized Gee Minnow Traps and/or modified pole seines of varying dimensions. Minnow traps soaked for 1.5 hours in all instances. All fish captured were identified to species, measured (or placed into size classes), and released near the point of capture alive, except where noted with a "mortality". Attachment pages/maps provide additional specific information regarding the presence of fish species, locations (lat/long), number&species captured, and additional info.
