IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

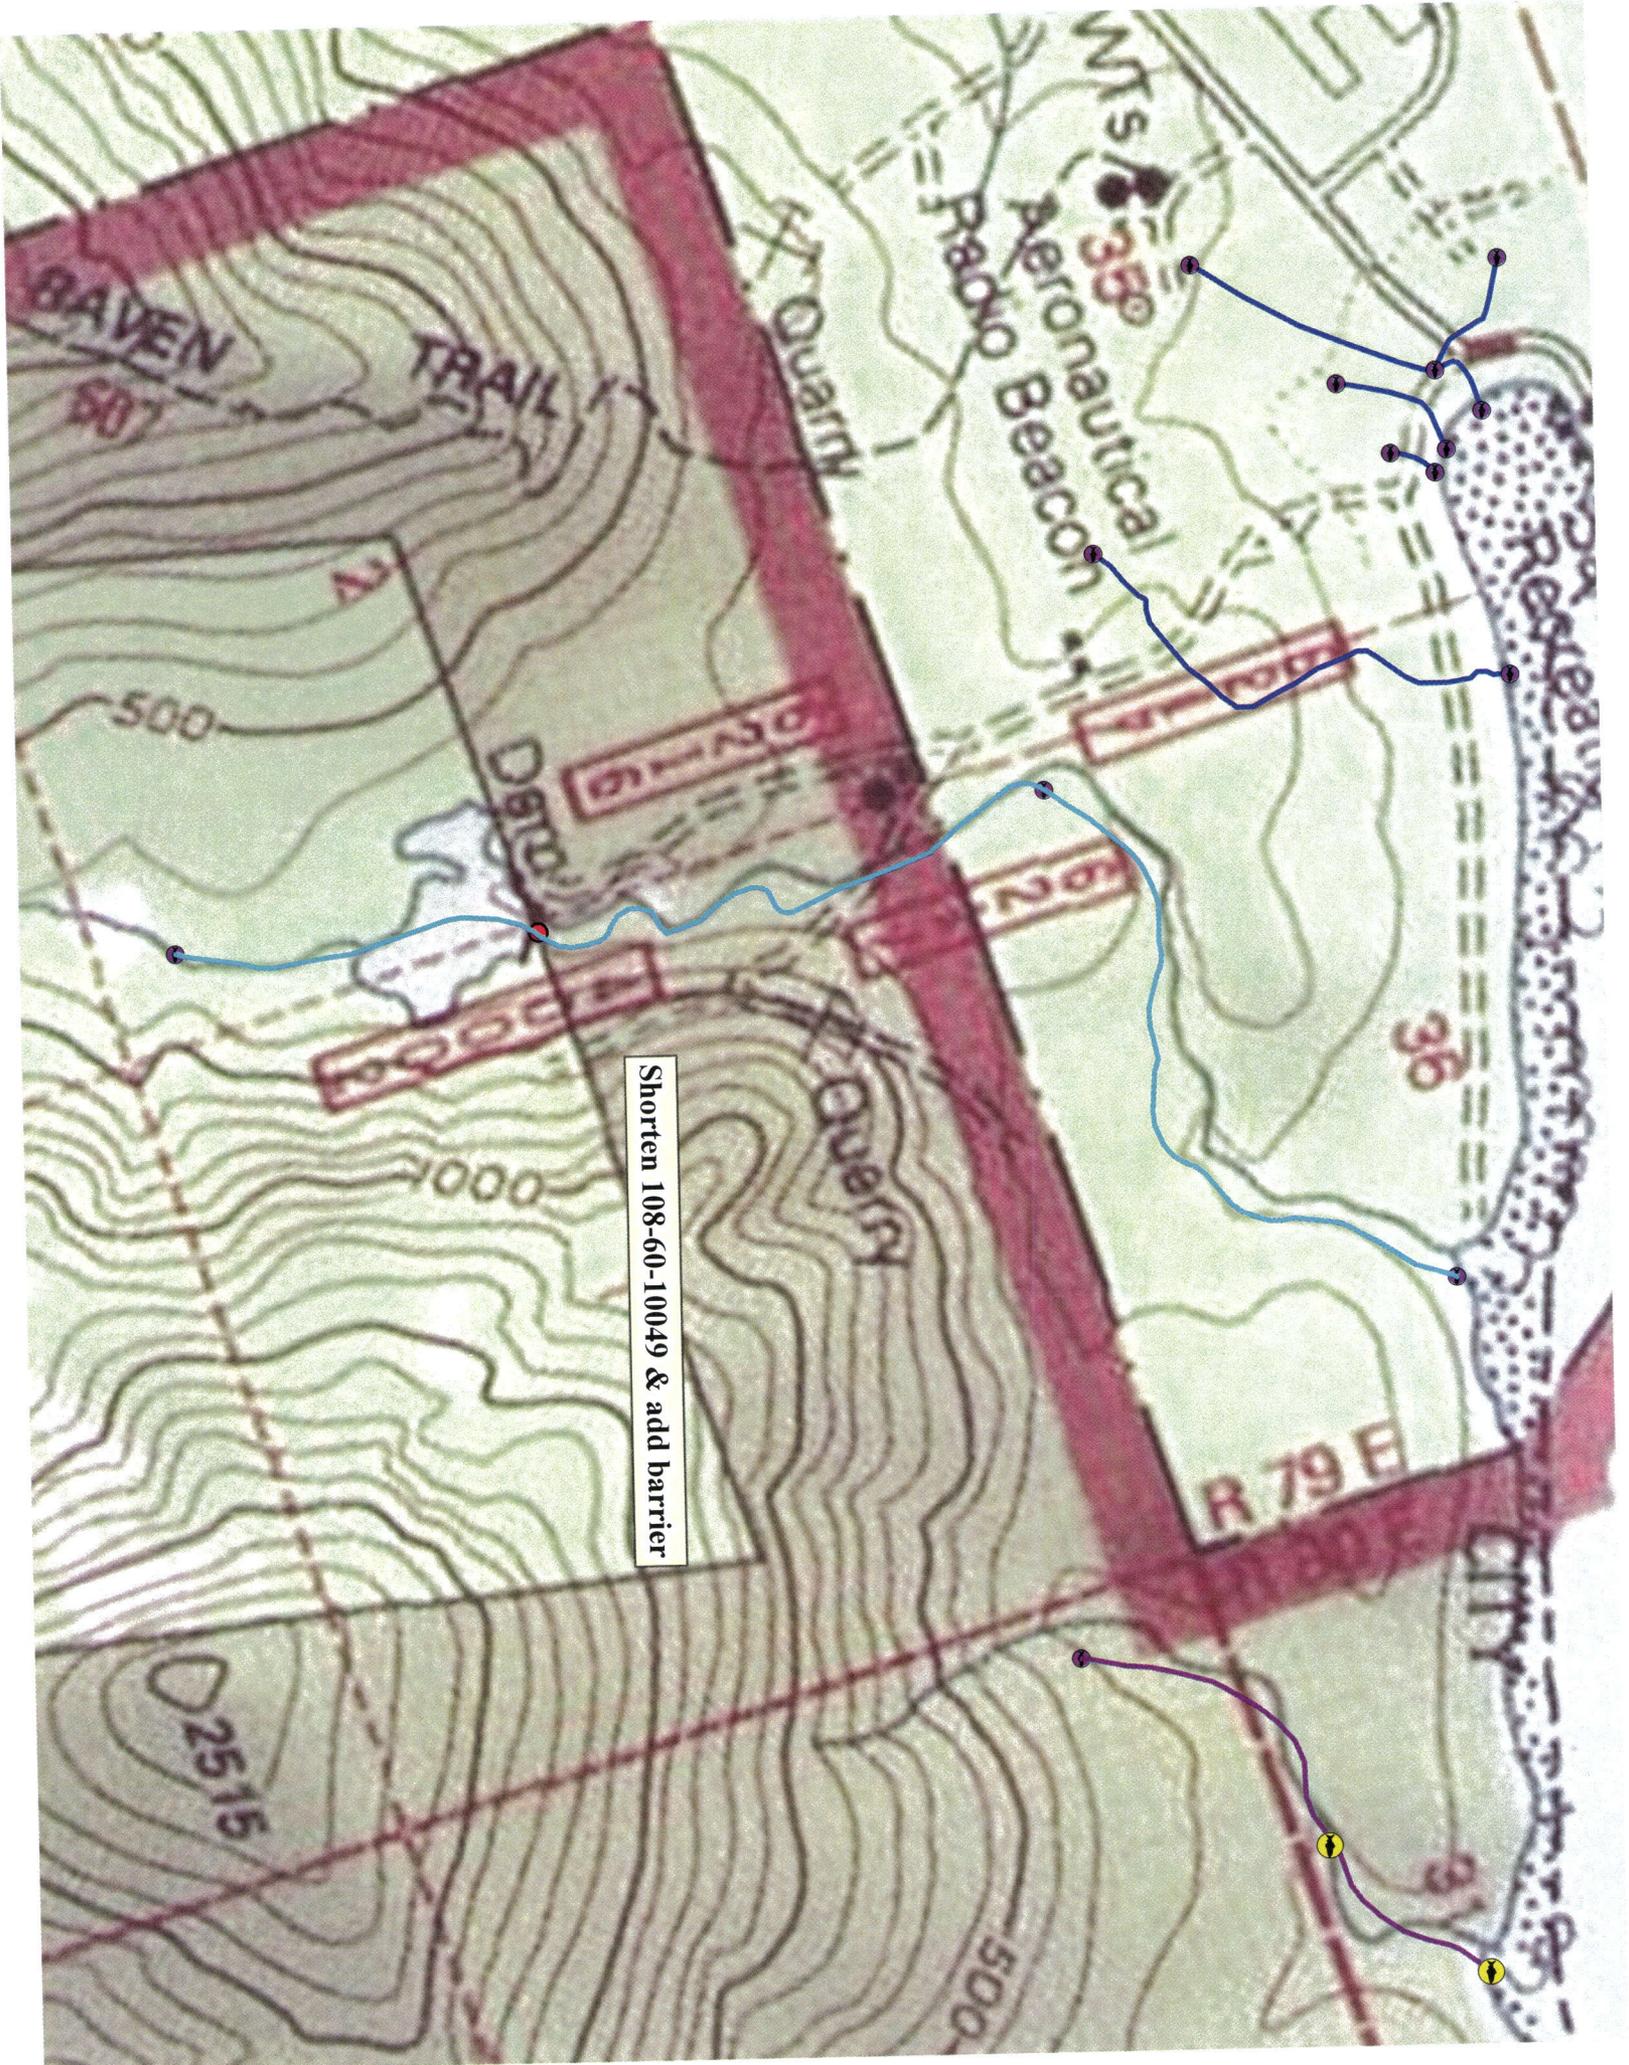

Comments: Existing maps of AWC for City Creek show anadromous waters past the City Creek Reservoir Dam, which is approx 20 feet high and a barrier to ^{upstream} passage. The upstream extent (anadromous) for Co, P, DV, CT should end at the Dam's downstream side, although there are both DV and CT in significant numbers upstream which do not have bidirectional fish passage by the dam.
