**Additional Comments:** This nomination provides information on the addition or supporting evidence of the presence for the species cutthroat trout for the AWC Stream #101-47-10111, unnamed. This information was collected as part of ADF&G's Fish Passage project. Traps were set above and below culvert. Trap A was set about 6 feet downstream from culvert in the outlet pool. Two cutthroat trout were trapped and measured from Trap A. Trap B was set about 54 feet upstream, no fish were caught in trap, but numerous unidentified fish were observed, most likely more cutthroat trout. Downstream from culvert there is a steep cascade and then another culvert about 200 - 300 feet downstream. Upstream habitat is very good with nice defined, low gradient channel with lots of overhead cover and large and small woody debris.
