Station Comments: Culvert between MP 16 and 17. Juvenile salmonids observed upstream and downstream of culvert. No upstream trap set do to lack of pools. Most flow for culvert comes from road ditches in both directions. There is a small creek directly upstream, but channel is poorly defined and there is no flow at current water levels. Creek disappears about 100 feet upstream from culvert and goes subsurface. Area appears to have some habitat at higher water levels. Downstream appears to have been ditched and creek runs about 300 feet before emptying out into Blind Slough.
