OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Dolly Varden	07/26/2013			✓	
cutthroat trout	07/26/2013			✓	

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:
 The current AWC line extends slightly above the upper reach latitude and longitude mentioned above.
 Coordinates (Lat,Long): Upper(56.5335,-132.7686) Lower(56.5371,-132.7583)

108-40-10430-2002**CORRECTION****Water body name:****Survey date:** 7/26/2013**Water body number:** 108-40-10430-2002**Species & Lifestage:** COP, DVp**Watershed:** Ohmer Creek-Frontal Sumner Strait**MTR:** C061S081E **Quad:** Petersburg C-3

Findings: We surveyed stream 108-40-10430-2002 and caught Dolly Varden char and cutthroat trout using an electrofishing unit (Table 1). This tributary is crossed by Woodpecker Cove Road and as stream goes up mountain it becomes a small stream in wide stream bed (Figure 2 and 3). The mouth of the stream connects with Blind Slough. We ended the survey at a cascade waterfall.

Recommendations: Correct current route in AWC.

Table 1.—108-40-10430-2002 survey data.

Waypoint	Latitude	Longitude	Notes	Sample Effort	Sample Results
162	56.5371	-132.7583	Tributary entering river right. We will finish tracking creek then come back to track tributary.		
8	56.5366	-132.7590	Small boulder waterfall ~ 4 ft drop into pool. Probably not a barrier with highwater.		
5	56.5353	-132.7636	Small tributary entering river left.		
4	56.5350	-132.7646	Bridge over Woodpecker Cove Road.		
182	56.5349	-132.7647	Upstream side of creek, heading up.		
183	56.5335	-132.7686	Streambed has become large cobbles, flat and likely easily moveable at high flows. At low flows, water trickles through the loose substrate.		
184	56.5330	-132.7698	Waterfall tributary on river left. This is above the cataloged portion. We'll shock up mainstem.		
185	56.5330	-132.7699	In mainstem.	EF	1 DV 50 mm
186	56.5329	-132.7699	In bouldery pool.	EF	1 CT 35 mm
187	56.5329	-132.7700	In large cobbly pool below 2' cascade falls.	EF	1 DV 55 mm
188	56.5330	-132.7702	Rolled a large CT in a rapid, unable to capture. Moveable bed load above, calling it.	EF/VI	1 CT 150 mm
